FINAL REPORT ACCEPTED BY OVSC:

Accepted By: _____________________________

Acceptance Date: __ July 22, 2010 ____________________
Compliance tests were conducted on the subject 2009 Kia Borrego in accordance with the specifications of the Office of Vehicle Safety Compliance Test Procedure No. TP208-14 for the determination of FMVSS 208 compliance. Test failures identified were as follows:

**TEST FAILURES:**
None

16. **Key Words**
Frontal Impact
40 kmph Vehicle Safety Compliance Testing
FMVSS 208, “Occupant Crash Protection”
FMVSS 212, “Windshield Mounting”
FMVSS 219, (partial), “Windshield Zone Intrusion”
FMVSS 301, “Fuel System Integrity”

18. **Distribution Statement**
Copies of this report are available from the following:

This Federal Motor Vehicle Safety Standard 208 compliance test is part of a program conducted for the National Highway Traffic Safety Administration (NHTSA) by MGA Research Corporation (MGA) under Contract No. DTNH22-08-D-00086. The purpose of this test was to determine whether the subject vehicle, a 2009 Kia Borrego, NHTSA No. C90509, meets certain performance requirements of FMVSS 208, "Occupant Crash Protection"; FMVSS 212, "Windshield Mounting"; FMVSS 219, "Windshield Zone Intrusion"; and FMVSS 301, "Fuel System Integrity". The compliance test was conducted in accordance with OVSC Laboratory Test Procedure No. TP208-14 dated April 16, 2008.
SECTION 2
TESTS PERFORMED

Test Vehicle: 2009 Kia Borrego  
NHTSA No.: C90509  
Test Program: FMVSS 208 Compliance  
Test Dates: 3/5/09 - 4/22/09

The following checked items indicate the tests that were performed:

1. Rear seating position seat belts  
2. Air bag labels (S4.5.1)  
3. Readiness indicator (S4.5.2)  
4. Passenger air bag manual cut-off device (S4.5.4)  
5. Lap belt lockability (S7.1.1.5)  
6. Seat belt warning system (S7.3)  
7. Seat belt contact force (S7.4.3)  
8. Seat belt latch plate access (S7.4.4)  
9. Seat belt retraction (S7.4.5)  
10. Seat belt guides and hardware (S7.4.6)  
11. Air bag suppression telltale (S19.2.2)  
12. Suppression tests with 12-month-old CRABI dummy (Part 572, Subpart R)  
13. Suppression tests with Newborn infant (Part 572, Subpart K)  
14. Suppression tests with 3-year-old dummy  
15. Suppression tests with 6-year-old dummy  
16. Test of Reactivation of the passenger air bag system with an unbelted 5th percentile female dummy  
17. Low risk deployment test with 12-month-old dummy (Part 572, Subpart R)  
18. Low risk deployment test with 3-year-old dummy (Part 572, Subpart P)  
19. Low risk deployment test with 6-year-old dummy (Part 572, Subpart N)  
20. Low risk deployment test with 5th female dummy (Part 572, Subpart O)  
21. Impact Tests
   - Frontal Oblique
     - Belted 50th male dummy driver and passenger (0 to 48 kmph) (S5.1.1(a))  
     - Unbelted 50th male dummy driver and passenger (0 to 48 kmph) (S5.1.2(a)(1))  
     - Unbelted 50th male dummy driver and passenger (32 to 40 kmph) (S5.1.2(a)(1) or S5.1.2(b))  
   - Frontal 0°  
     - Belted 50th male dummy driver (0 to 48 kmph) (S5.1.1(b)(1) or S5.1.1(a))  
     - Belted 50th male dummy passenger (0 to 48 kmph) (S5.1.1(b)(1) or S5.1.1(a))  
     - Belted 5th female dummy driver (0 to 48 kmph) (S16.1(a))  
     - Belted 5th female dummy passenger (0 to 48 kmph) (S16.1(a))  
     - Belted 50th male dummy driver and passenger (0 to 56 kmph) (S5.1.1(b)(2))  
     - Unbelted 50th male dummy driver and passenger (0 to 48 kmph) (S5.1.2(a)(1))  
     - Unbelted 50th male dummy driver (32 to 40 kmph) (S5.1.2(a)(2) or S5.1.2(b))  
     - Unbelted 50th male dummy passenger (32 to 40 kmph) (S5.1.2(a)(2) or S5.1.2(b))  
   - Unbelted 5th female dummy driver (32 to 40 kmph) (S16.1(b))  
   - Unbelted 5th female dummy passenger (32 to 40 kmph) (S16.1(b))
For the crash tests, the vehicle was instrumented with 8 accelerometers. The accelerometer data from the vehicle and dummies were sampled at 10,000 samples per second and processed as specified in SAE J211/1 MAR95 and FMVSS 208, S4.13.

The dynamic tests were recorded using high-speed digital video.

The vehicle appears to meet the performance requirements to which it was tested.

A blanket and visor were not used in the suppression testing because they did not affect the sensing system used on the vehicle.

Due to a software error, there was no right hand view high speed video for the 3 year old position 2 low risk deployment conducted on 3/30/09.

There was no valid data after 78ms on the Right Brake Caliper (X) accelerometer during the frontal impact test.

There was no valid data after 100ms on the Instrument Panel (X) accelerometer during the frontal impact test.

DATA SHEET 2
REPORT OF VEHICLE CONDITION

Test Vehicle: 2009 Kia Borrego
Test Program: FMVSS 208 Compliance
NHTSA No.: C90509
Test Dates: 3/5/09-4/22/09

CONTRACT NO.: DTNH22-08-D-00086  Date: 4/29/09
FROM (Lab and rep name): MGA Research Corporation
TO: NHTSA, OVSC, NVS-220

PURPOSE: (X) Initial Receipt  (   ) Received via Transfer  (X) Present vehicle condition

MODEL YEAR/MAKE/MODEL/BODY STYLE: 2009 Kia Borrego LX 4X2 MPV
MANUFACTURE DATE: 05/08
NHTSA NO. C90509  GVWR: 2650 kg (5842 lbs)
BODY COLOR: Copperhead  GAWR (Fr): 1300 kg (2866 lbs)
VIN: KNDJJ741995011463  GAWR (Rr): 1650 kg (3638 lbs)

ODOMETER READINGS: ARRIVAL (miles): 199  DATE: 2/12/09
                   COMPLETION (miles): 209  DATE: 4/22/09
PURCHASE PRICE: ($) 21,710
DEALER’S NAME: Boucher Fleet Group – 1421 East Moreland Blvd. Waukesha, WI 53186

A. All options listed on window sticker are present on the test vehicle:
   _X Yes  ____No
B. Tires and wheel rims are new and the same as listed:  _X Yes  ____No
C. There are no dents or other interior or exterior flaws:  _X Yes  ____No
D. The vehicle has been properly prepared and is in running condition:
   _X Yes  ____No
E. Keyless remote is available and working:  _X Yes  ____No
F. The glove box contains an owner's manual, warranty document, consumer information,
   and extra set of keys:  _X Yes  ____No
G. Proper fuel filler cap is supplied on the test vehicle:  _X Yes  ____No
H. Using permanent marker, identify vehicle with NHTSA number and FMVSS test type(s)
   on roof line above driver door or for school buses, place a placard with NHTSA number
   inside the windshield and to the exterior front and rear side of bus:
   _X Yes  ____No
I. Place vehicle in storage area:  _X Yes  ____No
J. Inspect the vehicle’s interior and exterior, including all windows, seats, doors, etc. to
   confirm that each system is complete and functional per the manufacturer’s
   specifications. Any damage, misadjustment, or other unusual condition that could
   influence the test program or test results shall be recorded. Report any abnormal
   condition to the NHTSA COTR before beginning any test:
   _X Vehicle OK  ____Conditions reported below in comment section

Identify the letter above to which any of the following comments apply.
Comments:___________________________________________________________________

REPORT OF VEHICLE CONDITION AT THE COMPLETION OF TESTING

LIST OF FMVSS TESTS PERFORMED BY THIS LAB: FMVSS 208, 212, 219, 301

VEHICLE: 2009 Kia Borrego NHTSA NO.: C90509

REMARKS:

Equipment that is no longer on the test vehicle as noted on previous page:
Right rear tail light, second row floor mats, tools, trunk compartment and carpet.

Explanation for equipment removal:
Components removed for instrumentation installation and to meet target weight.

Test Vehicle Condition:
25 mph frontal impact damage- front suspension & structure damaged, hood & front quarter panels damaged, radiator damaged, air bags & pretensioners deployed, Stoddard in fuel system

RECORDED BY: Jeff Lewandowski DATE: 4/29/2009
APPROVED BY: David Winkelbauer DATE: 4/29/2009

RELEASE OF TEST VEHICLE

DATA SHEET 5
AIR BAG LABELS (S4.5.1)

Test Vehicle: 2009 Kia Borrego
Test Program: FMVSS 208 Compliance
Test Technician: Wayne Dahlke

1. Air Bag Maintenance Label and Owner’s Manual Instructions: (S4.5.1(a))
   1.1 Does the manufacturer recommend periodic maintenance or replacement of the air bag?
      [ ] Yes (Go to 1.2)
      [ ] No (Go to 2)

   1.2 Does the vehicle have a label specifying air bag maintenance or replacement?
      [ ] Yes – Pass
      [ ] No – Fail

   1.3 Does the label contain one of the following?
      [ ] Yes – Pass
      [ ] No – Fail
      Check applicable schedule:
      __ Schedule on label specifies month and year (Record date______)
      __ Schedule on label specifies vehicle mileage (Record mileage______)
      __ Schedule on label specifies interval measured from date on certification label
      (Record interval______)

   1.4 Is the label permanently affixed within the passenger compartment such that it cannot
      be removed without destroying or defacing the label or vehicle part? (3/19/01 legal
      interpretation to Todd Mitchell)
      [ ] Yes – Pass
      [ ] No – Fail

   1.5 Is the label lettered in English?
      [ ] Yes – Pass
      [ ] No – Fail

   1.6 Is the label in block capitals and numerals?
      [ ] Yes – Pass
      [ ] No – Fail

   1.7 Are the letters and numerals at least 3/32 inches high?
      [ ] Yes – Pass
      [ ] No – Fail

   1.8 Does the owner’s manual set forth the recommended schedule for maintenance or
      replacement?
      [ ] Yes – Pass
      [ ] No – Fail

2. Does the owner’s manual: (S4.5.1(f))
   2.1 Include a description of the vehicle’s air bag system in an easily understandable format?
      [ ] Yes – Pass
      [ ] No – Fail

   2.2 Include a statement that the vehicle is equipped with an air bag and a lap/shoulder
      belt at the front outboard seating position?
      [ ] Yes – Pass
      [ ] No – Fail

   2.3 Include a statement that the air bag is a supplemental restraint at the front outboard
      seating position?
      [ ] Yes – Pass
      [ ] No – Fail

Test Vehicle: 2009 Kia Borrego
Test Program: FMVSS 208 Compliance
Test Technician: Wayne Dahlke
NHTSA No.: C90509
Test Date: 3/5/09
2.4 Emphasize that all occupants, including the driver, should always wear their seat belts whether or not an air bag is also provided at their seating positions to minimize the risk of severe injury or death in the event of a crash?

- Yes – Pass
- No – Fail

2.5 Provide any necessary precautions regarding the proper positioning of occupants, including children, at seating positions equipped with air bags to ensure maximum safety protection for those occupants?

- Yes – Pass
- No – Fail

2.6 Explain that no objects should be placed over or near the air bag on the steering wheel or on the instrument panel, because any such objects could cause harm if the vehicle is in a crash severe enough to cause the air bag to inflate?

- Yes – Pass
- No – Fail

2.7 Is the vehicle certified to meet the requirements of S14.5, S15, S17, S19, S21, S23, and S25? (Obtain answer to this question from the COTR) (S4.5.1(f)(2))

- Yes – (Go to 2.7.1)
- No – (Go to 3.)

2.7.1 Explain the proper functioning of the advanced air bag system? (S4.5.1(f)(2))

- Yes – Pass
- No – Fail

2.7.2 Provide a summary of the actions that may affect the proper functioning of the system? (S4.5.1(f)(2))

- Yes – Pass
- No – Fail

2.7.3 Present and explain the main components of the advanced passenger air bag system? (S4.5.1(f)(2)(i))

- Yes – Pass
- No – Fail

2.7.4 Explain how the components function together as part of the advanced passenger air bag system? (S4.5.1(f)(2)(ii))

- Yes – Pass
- No – Fail

2.7.5 Contain the basic requirements for proper operation, including an explanation of the actions that may affect the proper functioning of the system? (S4.5.1(f)(2)(iii))

- Yes – Pass
- No – Fail

2.7.6 Is the vehicle certified to the requirements of S19.2, S21.2, or 23.2 (automatic suppression)?

- Yes, continue with 2.7.6
- No, go to 2.7.7

2.7.6.1 Contain a complete description of the passenger air bag suppression system installed in the vehicle, including a discussion of any suppression zone? (S4.5.1(f)(2)(iv))

- Yes – Pass
- No – Fail

2.7.6.2 Discuss the telltale light, specifying its location in the vehicle and explaining when the light is illuminated?

- Yes – Pass
- No – Fail
2.7.7 Explain the interaction of the advanced passenger air bag system with other vehicle components, such as seat belts, seats or other components? (S4.5.1(f)(2)(v))

- Yes – Pass
- No – Fail

2.7.8 Summarize the expected outcomes when child restraint systems, children and small teenagers or adults are both properly and improperly positioned in the passenger seat, including cautionary advice against improper placement of child restraint systems? (S4.5.1(f)(2)(vi))

- Yes – Pass
- No – Fail

2.7.9 Provide information on how to contact the vehicle manufacturer concerning modifications for persons with disabilities that may affect the advanced air bag system? (S4.5.1(f)(2)(vii))

- Yes – Pass
- No – Fail

3. Sun Visor Air Bag Warning Label (S4.5.1(b)): Vehicles certified to meet the requirements of S19, S21 and S23. (S4.5.1(b)(3))

- Is the label permanently affixed (including permanent marking on the visor material or molding into the visor material) to either side of the sun visor at each front outboard seating position such that it cannot be removed without destroying or defacing the label or the sun visor? (S4.5.1(b)(3)) (3/19/01 legal interpretation to Todd Mitchell)

- Driver Side, Yes – Pass
- Driver Side, No – Fail
- Passenger Side, Yes – Pass
- Passenger Side, No – Fail
3.2 Does the label conform in content to the label shown in Figure 11 at each front outboard seating position? (S4.5.1(b)(2)) *Vehicles without back seats or the back seat is too small to accommodate a rear-facing child restraint may omit the statement: “Never put a rear-facing child seat in the front.” (S4.5.1(b)(3)(v))*

![Figure 11. Sun Visor Label Visible when Visor is in Down Position.](image)

3.3 Is the label heading area yellow with the word “WARNING” and the alert symbol in black? (S4.5.1(b)(3)(i))

3.5 Is the message area at least 30 cm²? (S4.5.1(b)(3)(ii))

The message area consists of the total label area minus the yellow heading area and the pictogram. The pictogram is enclosed on the left side and bottom by the edge of the label. The top edge of the pictogram area is defined by a horizontal line midway between the uppermost edge of the pictogram and the lowermost edge of the text. The right side of the pictogram is defined by a vertical line midway between the rightmost edge of the pictogram and the leftmost edge of the text, including any bullets. (See 5/6/03 interpretation to Gerald Plante on behalf of Subaru)

Driver Side: Length 87 mm, Width 39 mm
Passenger Side: Length 87 mm, Width 39 mm
Driver actual message area 33.9 cm²
Passenger actual message area 33.9 cm²

X Driver Side, Yes – Pass
X Driver Side, No – Fail
X Passenger Side, Yes – Pass
X Passenger Side, No – Fail

3.6 Is the pictogram black on a white background? (S4.5.1(b)(3)(iii))

X Driver Side, Yes – Pass
X Driver Side, No – Fail
X Passenger Side, Yes – Pass
X Passenger Side, No – Fail

3.7 Is the pictogram at least 30 mm in length? (S4.5.1(b)(3)(iii))

Driver side: Length: 33 mm
Passenger side: Length: 33 mm

X Driver Side, Yes – Pass
X Driver Side, No – Fail
X Passenger Side, Yes – Pass
X Passenger Side, No – Fail

3.8 Is the same side of the sun visor that contains the air bag warning label free of other information with the exception of the air bag maintenance label and/or the rollover-warning label? (S4.5.1(b)(5)(i))

X Driver Side, Yes – Pass
X Driver Side, No – Fail
X Passenger Side, Yes – Pass
X Passenger Side, No – Fail

3.9 Is the sun visor free of other information about air bags or the need to wear seat belts with the exception of the air bag alert label and/or the rollover-warning label? (S4.5.1(b)(5)(ii))

X Driver Side, Yes – Pass
X Driver Side, No – Fail
X Passenger Side, Yes – Pass
X Passenger Side, No – Fail

3.10 Does the driver side visor contain a rollover-warning label on the same side of the visor as the air bag warning label?

X Yes (go to 3.10.1)
— No (go to 4., skipping 3.10.1 through 3.10.3)
3.10.1 Are both the rollover-warning label and the air bag warning label surrounded by a continuous solid-lined border?

_X_ Yes (go to 3.10.2 and skip 3.10.3)

___ No (go to 3.10.3 and skip 3.10.2)

3.10.2 Is the shortest distance from the border of the rollover label to the border of the air bag warning label at least 1 cm? (575.105 (d)(1)(iv)(B))

2.0 cm actual distance

_X_ Yes-Pass  ___No-FAIL

3.10.3 Is the shortest distance from any of the lettering or graphics on the rollover-warning label to any of the lettering or graphics of the air bag warning label at least 3 cm? (575.105 (d)(1)(iv)(A))

_________ actual distance

_X_ Yes-Pass  ___No-FAIL

4. Air Bag Alert Label (S4.5.1(c) (A “Rollover Warning Label” or “Rollover Alert Label” may be on the same side of the driver’s sun visor as the “Air Bag Alert Label.” 575.105(d)))

4.1 Is the Sun Visor Warning Label visible when the sun visor is in the stowed position?

_X_ If yes for driver and passenger, go to 5.

_X_ Driver Side, Yes

 Driver Side, No

_X_ Passenger Side, Yes

 Passenger Side, No

4.2 Is the air bag alert label permanently affixed (including permanent marking on the visor material or molding into the visor material) to the sun visor at each front outboard seating position such that it cannot be removed without destroying or defacing the label or the sun visor? (S4.5.1(c)) (3/19/01 legal interpretation to Todd Mitchell)

___ Driver Side, Yes – Pass

___ Driver Side, No – Fail

___ Passenger Side, Yes – Pass

___ Passenger Side, No – Fail

4.3 Is the air bag alert label visible when the visor is in the stowed position? (S4.5.1(c))

___Driver Side, Yes – Pass

___Driver Side, No – Fail

___Passenger Side, Yes – Pass

___Passenger Side, No – Fail
4.4 Does the label conform in content to the label shown in Figure 6C? (S4.5.1(c))

- Driver Side, Yes – Pass
- Driver Side, No – Fail
- Passenger Side, Yes – Pass
- Passenger Side, No – Fail

4.5 Is the message area black with yellow text? (S4.5.1(c)(1))

- Driver Side, Yes – Pass
- Driver Side, No – Fail
- Passenger Side, Yes – Pass
- Passenger Side, No – Fail

4.6 Is the message area at least 20 cm²? (S4.5.1(c)(1)) The message area consists of the black part of the label.

Driver Side: Length______, Width______
Passenger Side: Length______, Width______
Actual message area ________ cm²

- Driver Side, Yes – Pass
- Driver Side, No – Fail
- Passenger Side, Yes – Pass
- Passenger Side, No – Fail

4.7 Is the pictogram black with a red circle and slash on a white background? (S4.5.1(c)(2))

- Driver Side, Yes – Pass
- Driver Side, No – Fail
- Passenger Side, Yes – Pass
- Passenger Side, No – Fail

4.8 Is the pictogram at least 20 mm in diameter? (S4.5.1(c)(2))

Driver Side: Diameter _________mm
Passenger Side: Diameter _________mm

- Driver Side, Yes – Pass
- Driver Side, No – Fail
- Passenger Side, Yes – Pass
- Passenger Side, No – Fail
5. Label on the Dashboard: Vehicles certified to meet the requirements of S19, S21 and S23?

5.1 Does the vehicle have a label on the dash or steering wheel hub? (S4.5.1(e)(3))
- Yes – Pass The label was missing and it could not be determined when it was removed. Therefore it was not evaluated.
- No – Fail

5.2 Is the label clearly visible from all front seating positions? (S4.5.1(e)(3))
- Yes – Pass
- No – Fail

5.3 Does the label conform in content to the label shown in Figure 12? (S4.5.1(e)(3))
- Yes – Pass
- No – Fail

Vehicles without back seats may omit the statement: "The back seat is the safest place for children." Vehicles without back seats or too small to accommodate a rear-facing child restraint consistent with S4.5.4.1 as determined in DATA SHEET 7 may omit the statement "Never put a rear-facing child seat in the front." (S4.5.1(e)(3)(iii))

5.4 Is the heading area yellow with black text? (S4.5.1(e)(3)(i))
- Yes – Pass
- No – Fail

5.5 Is the message white with black text? (S4.5.1(e)(3)(ii))
- Yes – Pass
- No – Fail

5.6 Is the message area at least 30 cm²? (S4.5.1(e)(3)(ii)) The message area consists of the total label area minus the yellow heading area. (See 5/6/03 interpretation to Gerald Plante on behalf of Subaru)

Length __________, Width __________
Actual message area __________ cm²
- Yes – Pass
- No – Fail

Date: 3/5/09
An occupant restraint system that deploys in the event of a crash shall have a monitoring system with a readiness indicator. A totally mechanical system is exempt from this requirement. (11/8/94 legal interpretation to Lawrence F. Hennegerger on behalf of Breed)

1. Is the system totally mechanical? (If Yes, this Data Sheet is complete).
   - Yes
   - X No

2. Describe the location of the readiness indicator: Right Side

3. Is the readiness indicator clearly visible to the driver?
   - X Yes – Pass
   - No - Fail

4. Is a list of the elements in the occupant restraint system, being monitored by the readiness indicator, provided on a label or in the owner’s manual?
   - X Yes – Pass
   - No - Fail

5. Does the vehicle have an on-off switch for the passenger air bag?
   - If Yes (go to 6)
   - X If No (this form is complete)

6. Is the air bag readiness indicator off when the passenger air bag switch is in the off position?
   - Yes – Pass
   - No - Fail

REMARKS:

I certify that I have read and performed each instruction.

Signature: __________________________

Date: 3/5/09
1. Is the vehicle equipped with an on-off switch that deactivates the air bag installed at the right front outboard seating position?
  - Yes, go to 2
  - No, this sheet is complete

2. Does the vehicle have any forward-facing rear designated seating positions? (S4.5.4.1(a))
  - Yes, go to 3
  - No, go to 4

3. Verification there is room for a child restraint in the rear seat behind the driver’s seat. (S4.5.4.1(b))
   3.1 Using all the controls that affect the fore-aft movement of the seat, move the seat to the rearmost position. Mark this position.
   - N/A – the seat does not have fore-aft adjustment
   3.2 Using all the controls that affect the fore-aft movement of the seat, move the seat to the foremost position. Mark this position.
   - N/A – the seat does not have fore-aft adjustment
   3.3 Move the seat to the middle of the foremost and rearmost positions. (S8.1.2)
   - N/A – the seat does not have a fore-aft adjustment
   3.4 If the driver’s seat height is adjustable, use all the controls that affect height to put it in the lowest position while maintaining the middle fore-aft position. (S8.1.2)
   - N/A – No seat height adjustment
   3.5 Position the driver’s seat adjustable lumbar supports so that the lumbar support is in its lowest, retracted or deflated adjustment position. (S8.1.3)
   - N/A – No lumbar adjustment
   3.6 The driver’s seat back angle, if adjustable, is set at the manufacturer’s nominal design riding position for a 50th percentile adult male in the manner specified by the manufacturer. (S4.5.4.1(b) and S8.1.3)
   - N/A – No seat back angle adjustment
   - Manufacturer’s design driver’s seat back angle ______________
   - Tested driver’s seat back angle ______________

4. Is the driver seat a bucket seat?
   - Yes, go to 3.7.1 and skip 3.7.2.
   - No, go to 3.7.2 and skip 3.7.1.

3.7 Bucket seats:
   3.7.1 Locate and mark a vertical Plane B through the longitudinal centerline of the driver’s seat cushion. The longitudinal centerline of a bucket seat cushion is determined at SgRP. (S16.3.1.10) (S4.5.4.1(b)(1))
   3.7.2 Locate the longitudinal horizontal line in plane B that is tangent to the highest point of the rear seat cushion behind the driver’s seat. Measure along this line from the front of the seat back of the rear seat to the rear of the seat back of the driver’s seat.
   - mm distance
     - less than 720 mm – Pass
     - more than 720 mm – FAIL
   Go to 4
3.7.2 Bench seats (including split bench seats):

3.7.2.1 Locate and mark a vertical Plane B through the center of the steering wheel parallel to the vehicle longitudinal centerline. (S4.5.4.1(b)(2))

3.7.2.2 Locate the longitudinal horizontal line in plane B that is tangent to the highest point of the rear seat cushion. Measure along this line from the front of the seat back of the rear seat to the rear of the seat back of the front seat.

____ mm distance
__less than 720 mm – Pass
__more than 720 mm - FAIL

Go to 4

4. Does the device turn the air bag on and off using the vehicle’s ignition key? (S4.5.4.2)

Yes – Pass
No – Fail

5. Is the on-off device separate from the ignition switch? (S4.5.4.2)

Yes – Pass
No – Fail

6. Is there a telltale light that comes on when the passenger air bag is turned off? (S4.5.4.2)

Yes – Pass
No – Fail

7. Telltale light (S4.5.4.3)

7.1 Is the light yellow? (S4.5.4.3(a))

Yes – Pass
No – Fail

7.2 Are the words “PASSENGER AIR BAG OFF” or “PASS AIR BAG OFF” (S4.5.4.3(b)) on the telltale?

7.2.1 Yes – Pass, go to 7.3
No – go to 7.2.2

7.2.2 within 25 mm of the telltale?

Measurement from the edge of the telltale light (mm):

Yes – Pass
No – Fail

7.3 Does the telltale remain illuminated while the air bag is turned off? (S4.5.4.3(c)) (Leave the air bag off for 5 minutes.)

Yes – Pass
No – Fail

7.4 Is the telltale illuminated while the air bag is turned on? (S4.5.4.3(d))

Yes – Fail
No – Pass

7.5 Is the telltale combined with the air bag readiness indicator? (S4.5.4.3(e))

Yes – Fail
No – Pass

8. Owner’s Manual

8.1 Does the owner’s manual contain complete instructions on the operation of the on-off switch? (S4.5.4.4(a))

Yes – Pass
No – Fail
8.2 Does the owner’s manual contain a statement that the on-off switch should only be used when a member of one of the following risk groups is occupying the right front passenger seating position? (S4.5.4.4(b))

- Infants: there is no back seat
- the rear seat is too small to accommodate a child restraint
- there is a medical condition that must be monitored constantly

- Children aged 1 to 12: there is no back seat
- space is not always available in the rear seat
- there is a medical condition that must be monitored constantly

- Medical condition: medical risk causes special risk for passenger
- greater risk for harm than with the air bag on

- Yes – Pass
- No – Fail

8.3 Does the owner’s manual contain a warning about the safety consequences of using the on-off switch at other times?

- Yes – Pass
- No – Fail

REMARKS:

I certify that I have read and performed each instruction.

Complete one of these forms for each designated seating position that can be adjusted to forward-facing or that is a forward-facing seat, other than the driver's seat (S7.1.1.5(a), and that has seat belt retractors that are not solely automatic locking retractors. (S7.1.1.5(c))

**DESIGNATED SEATING POSITION:** Front Passenger

1. Record test fore-aft seat position: **REAR**  
   (S7.1.1.5(c)(1)) (Any position is acceptable)

2. Does the lap belt portion of the seat belt in the forward-facing seat or seat that can be adjusted to forward-facing consist of a locking device that does **NOT** have to be attached by the vehicle user to the seat belt webbing, retractor, or any other part of the vehicle. (S7.1.1.5 (a))
   - X Yes – Pass
   - No – Fail

3. Does the lap belt portion of the seat belt in the forward-facing seat or seat that can be adjusted to forward-facing consist of a locking device that does **NOT** require inverting, twisting or deforming of the belt webbing. (S7.1.1.5 (a))
   - X Yes – Pass
   - No – Fail

4. Place any adjustable seat belt anchorage in the lowest adjustment position.  
   - □ N/A The anchorage is not adjustable.

5. Buckle the seat belt. (S7.1.1.5(c)(1))

6. Locate a reference point A on the seat belt buckle. (S7.1.1.5(c)(2))

7. Locate a reference point B on the attachment hardware or retractor assembly at the other end of the lap belt or lap belt portion of the seat belt assembly. (S7.1.1.5(c)(2))

8. Does the vehicle user need to take some action to activate the locking feature on the lap belt portion of the seat belt in any forward-facing seat or seat that can be adjusted to forward-facing?  
   - X Yes (go to 8.1)
   - No (go to 9)

8.1 Does the vehicle owner's manual include a description in words and/or diagrams describing how to activate the locking feature so that the seat belt assembly can tightly secure a child restraint system and how to deactivate the locking feature to remove the child restraint system. (S7.1.1.5(b))
   - X Yes – Pass
   - No – Fail

9. Adjust the lap belt or lap belt portion of the seat belt assembly according to any procedures recommended in the vehicle owner’s manual to activate any locking feature so that the webbing between points A and B is at the maximum length allowed by the belt system. (S7.1.1.5(c)(2) & S7.1.1.5(c)(1))

10. Measure and record the distance between points A and B along the longitudinal centerline of the webbing for the lap belt or lap belt portion of the seat belt assembly. (S7.1.1.5(c)(2))
    - Measured distance between A and B (inches): **68 ¼**
11. Readjust the belt system so that the webbing between points A and B is at ½ the maximum length of the webbing. (S7.1.1.5(c)(3))

12. To the lap belt or lap belt portion of the seat belt assembly, apply a preload of 10 pounds using the webbing tension pull device in Figure 5. Apply the load in a vertical plane parallel to the longitudinal axis of the vehicle and passing through the seating reference point of the designated seating position. Apply the preload in a horizontal direction toward the front of the vehicle with a force application angle of not less than 5 degrees nor more than 15 degrees above the horizontal. (S7.1.1.5(c)(4))

   Measured force application angle: 10° (spec. 5 - 15 degrees)

13. Measure the length between points A and B along the longitudinal centerline of the webbing while the preload is being applied. (S7.1.1.5(c)(4))

   Measured distance between A and B: 34 ¼ inches

14. Increase the load to 50 pounds at a rate of no more than 50 pounds per second. Attain the load in not more than 5 seconds. (If webbing sensitive emergency locking retractors are installed as part of the lap belt or lap belt portion of the seat belt assembly, apply the load at a rate less than the threshold value for lock-up specified by the manufacturer.) Maintain the load for at least 5 seconds. Measure and record the distance between points A and B along the longitudinal centerline of the webbing. (S7.1.1.5(c)(5))

   Record onset rate: 15 lb/sec (spec. 10 to 50 lb/sec) (S7.1.1.5(c)(5))

   Measured distance between A and B: 34 ½ inches (S7.1.1.5(c)(6))

15. Let the seat belt webbing retract to its minimum length with the seat belt still buckled

16. To the lap belt or lap belt portion of the seat belt assembly, apply a preload of 10 pounds using the webbing tension pull device in Figure 5. Apply the load in a vertical plane parallel to the longitudinal axis of the vehicle and passing through the seating reference point of the designated seating position. Apply the preload in a horizontal direction toward the front of the vehicle with a force application angle of not less than 5 degrees nor more than 15 degrees above the horizontal. (S7.1.1.5(c)(4))

   Measured force application angle: 10° (spec. 5 - 15 degrees)

17. Measure the length between points A and B along the longitudinal centerline of the webbing while the preload is being applied. (S7.1.1.5(c)(4))

   Measured distance between A and B: 20 ¼ inches

18. Increase the load to 50 pounds at a rate of no more than 50 pounds per second. Attain the load in not more than 5 seconds. (If webbing sensitive emergency locking retractors are installed as part of the lap belt or lap belt portion of the seat belt assembly, apply the load at a rate less than the threshold value for lock-up specified by the manufacturer.) Maintain the load for at least 5 seconds. Measure and record the distance between points A and B along the longitudinal centerline of the webbing. (S7.1.1.5(c)(5))

   Record onset rate: 15 lb/sec (spec. 10 to 50 lb/sec) (S7.1.1.5(c)(5))

   Measured distance between A and B: 21 ¼ inches (S7.1.1.5(c)(6))

19. Subtract the measurement in 13 from the measurement in 14 and the measurement in 17 from the measurement in 18. Is the difference 2 inches or less for both? (S7.1.1.5(c)(7))

   14 – 13 = 34 ½ - 34 ¼ = ¼ inch;

   18 – 17 = 21 ¼ - 20 ½ = ½ inch

   Yes - Pass

   No - Fail
20. Subtract the measurement in 14 from the measurement in 10 and the measurement in 18 from the measurement in 10. Is the difference 3 inches or more for both? (S7.1.1.5(c)(8))

10-14 = 68 ¼ - 34 ½ = 33 ¾ inches;

10-18 = 68 ¼ - 21 ¼ = 47 inches

Yes – Pass
No – Fail

DATA SHEET 8

LAP BELT LOCKABILITY

Passenger cars, trucks, buses, and multipurpose passenger vehicles with a GVWR of 10,000 pounds or less. (S7.1.1.5)

Test Vehicle: 2009 Kia Borrego  
NHTSA No.: C90509  
Test Program: FMVSS 208 Compliance  
Test Date: 3/5/09  
Test Technician: Wayne Dahlke

Complete one of these forms for each designated seating position that can be adjusted to forward-facing or that is a forward-facing seat, other than the driver’s seat (S7.1.1.5(a), and that has seat belt retractors that are not solely automatic locking retractors. (S7.1.1.5(c))

DESIGNATED SEATING POSITION: Left Rear Passenger

1. Record test fore-aft seat position: REAR  
(S7.1.1.5(c)(1)) (Any position is acceptable)

2. Does the lap belt portion of the seat belt in the forward-facing seat or seat that can be adjusted to forward-facing consist of a locking device that does NOT have to be attached by the vehicle user to the seat belt webbing, retractor, or any other part of the vehicle. (S7.1.1.5 (a))

   X Yes – Pass  
   No – Fail

3. Does the lap belt portion of the seat belt in the forward-facing seat or seat that can be adjusted to forward-facing consist of a locking device that does NOT require inverting, twisting or deforming of the belt webbing. (S7.1.1.5 (a))

   X Yes – Pass  
   No – Fail

4. Place any adjustable seat belt anchorage in the lowest adjustment position.

   X N/A The anchorage is not adjustable.

5. Buckle the seat belt. (S7.1.1.5(c)(1))

6. Locate a reference point A on the seat belt buckle. (S7.1.1.5(c)(2))

7. Locate a reference point B on the attachment hardware or retractor assembly at the other end of the lap belt or lap belt portion of the seat belt assembly. (S7.1.1.5(c)(2))

8. Does the vehicle user need to take some action to activate the locking feature on the lap belt portion of the seat belt in any forward-facing seat or seat that can be adjusted to forward-facing?

   X Yes (go to 8.1)  
   No (go to 9)

8.1 Does the vehicle owner’s manual include a description in words and/or diagrams describing how to activate the locking feature so that the seat belt assembly can tightly secure a child restraint system and how to deactivate the locking feature to remove the child restraint system. (S7.1.1.5(b))

   X Yes – Pass  
   No – Fail

9. Adjust the lap belt or lap belt portion of the seat belt assembly according to any procedures recommended in the vehicle owner’s manual to activate any locking feature so that the webbing between points A and B is at the maximum length allowed by the belt system. (S7.1.1.5(c)(2) & S7.1.1.5(c)(1))

10. Measure and record the distance between points A and B along the longitudinal centerline of the webbing for the lap belt or lap belt portion of the seat belt assembly. (S7.1.1.5(c)(2))

   X Measured distance between A and B (inches): 68
11. Readjust the belt system so that the webbing between points A and B is at \( \frac{1}{2} \) the maximum length of the webbing. (S7.1.1.5(c)(3))

12. To the lap belt or lap belt portion of the seat belt assembly, apply a preload of 10 pounds using the webbing tension pull device in Figure 5. Apply the load in a vertical plane parallel to the longitudinal axis of the vehicle and passing through the seating reference point of the designated seating position. Apply the preload in a horizontal direction toward the front of the vehicle with a force application angle of not less than 5 degrees nor more than 15 degrees above the horizontal. (S7.1.1.5(c)(4))

   Measured force application angle: ______ (spec. 5 - 15 degrees)

13. Measure the length between points A and B along the longitudinal centerline of the webbing while the preload is being applied. (S7.1.1.5(c)(4))

   Measured distance between A and B: ______ inches

14. Increase the load to 50 pounds at a rate of no more than 50 pounds per second. Attain the load in not more than 5 seconds. (If webbing sensitive emergency locking retractors are installed as part of the lap belt or lap belt portion of the seat belt assembly, apply the load at a rate less than the threshold value for lock-up specified by the manufacturer.) Maintain the load for at least 5 seconds. Measure and record the distance between points A and B along the longitudinal centerline of the webbing. (S7.1.1.5(c)(5))

   Record onset rate: ______ lb/sec (spec. 10 to 50 lb/sec) (S7.1.1.5(c)(5))
   Measured distance between A and B: ______ inches (S7.1.1.5(c)(6))

15. Let the seat belt webbing retract to its minimum length with the seat belt still buckled

16. To the lap belt or lap belt portion of the seat belt assembly, apply a preload of 10 pounds using the webbing tension pull device in Figure 5. Apply the load in a vertical plane parallel to the longitudinal axis of the vehicle and passing through the seating reference point of the designated seating position. Apply the preload in a horizontal direction toward the front of the vehicle with a force application angle of not less than 5 degrees nor more than 15 degrees above the horizontal. (S7.1.1.5(c)(4))

   Measured force application angle: ______ (spec. 5 - 15 degrees)

17. Measure the length between points A and B along the longitudinal centerline of the webbing while the preload is being applied. (S7.1.1.5(c)(4))

   Measured distance between A and B: ______ inches

18. Increase the load to 50 pounds at a rate of no more than 50 pounds per second. Attain the load in not more than 5 seconds. (If webbing sensitive emergency locking retractors are installed as part of the lap belt or lap belt portion of the seat belt assembly, apply the load at a rate less than the threshold value for lock-up specified by the manufacturer.) Maintain the load for at least 5 seconds. Measure and record the distance between points A and B along the longitudinal centerline of the webbing. (S7.1.1.5(c)(5))

   Record onset rate: ______ lb/sec (spec. 10 to 50 lb/sec) (S7.1.1.5(c)(5))
   Measured distance between A and B: ______ inches (S7.1.1.5(c)(6))

19. Subtract the measurement in 13 from the measurement in 14 and the measurement in 17 from the measurement in 18. Is the difference 2 inches or less for both? (S7.1.1.5(c)(7))

   14 – 13 = 41 – 40 ½ = \( \frac{1}{2} \) inch;
   18 – 17 = 20 – 19 ¾ = \( \frac{3}{4} \) inch

   Yes – Pass
   No – Fail
20. Subtract the measurement in 14 from the measurement in 10 and the measurement in 18 from the measurement in 10. Is the difference 3 inches or more for both? (S7.1.1.5(c)(8))

10-14 = 68 – 41 = 27 inches;
10-18 = 68 – 20 = 48 inches

Yes – Pass
No – Fail

</table>

Test Vehicle: 2009 Kia Borrego  
NHTSA No.: C90509  
Test Program: FMVSS 208 Compliance  
Test Technician: Wayne Dahlke  
Test Date: 3/5/09
11. Readjust the belt system so that the webbing between points A and B is at ½ the maximum length of the webbing. (S7.1.1.5(c)(3))

12. To the lap belt or lap belt portion of the seat belt assembly, apply a preload of 10 pounds using the webbing tension pull device in Figure 5. Apply the load in a vertical plane parallel to the longitudinal axis of the vehicle and passing through the seating reference point of the designated seating position. Apply the preload in a horizontal direction toward the front of the vehicle with a force application angle of not less than 5 degrees nor more than 15 degrees above the horizontal. (S7.1.1.5(c)(4))

   Measured force application angle: __10__ (spec. 5 - 15 degrees)

13. Measure the length between points A and B along the longitudinal centerline of the webbing while the preload is being applied. (S7.1.1.5(c)(4))

   Measured distance between A and B: __35 ½__ inches

14. Increase the load to 50 pounds at a rate of no more than 50 pounds per second. Attain the load in not more than 5 seconds. (If webbing sensitive emergency locking retractors are installed as part of the lap belt or lap belt portion of the seat belt assembly, apply the load at a rate less than the threshold value for lock-up specified by the manufacturer.) Maintain the load for at least 5 seconds. Measure and record the distance between points A and B along the longitudinal centerline of the webbing. (S7.1.1.5(c)(5))

   Record onset rate: __15__ lb/sec (spec. 10 to 50 lb/sec) (S7.1.1.5(c)(5))

   Measured distance between A and B: __35 ½__ inches (S7.1.1.5(c)(6))

15. Let the seat belt webbing retract to its minimum length with the seat belt still buckled.

16. To the lap belt or lap belt portion of the seat belt assembly, apply a preload of 10 pounds using the webbing tension pull device in Figure 5. Apply the load in a vertical plane parallel to the longitudinal axis of the vehicle and passing through the seating reference point of the designated seating position. Apply the preload in a horizontal direction toward the front of the vehicle with a force application angle of not less than 5 degrees nor more than 15 degrees above the horizontal. (S7.1.1.5(c)(4))

   Measured force application angle: __10__ (spec. 5 - 15 degrees)

17. Measure the length between points A and B along the longitudinal centerline of the webbing while the preload is being applied. (S7.1.1.5(c)(4))

   Measured distance between A and B: __13__ inches

18. Increase the load to 50 pounds at a rate of no more than 50 pounds per second. Attain the load in not more than 5 seconds. (If webbing sensitive emergency locking retractors are installed as part of the lap belt or lap belt portion of the seat belt assembly, apply the load at a rate less than the threshold value for lock-up specified by the manufacturer.) Maintain the load for at least 5 seconds. Measure and record the distance between points A and B along the longitudinal centerline of the webbing. (S7.1.1.5(c)(5))

   Record onset rate: __15__ lb/sec (spec. 10 to 50 lb/sec) (S7.1.1.5(c)(5))

   Measured distance between A and B: __13 ½__ inches (S7.1.1.5(c)(6))

19. Subtract the measurement in 13 from the measurement in 14 and the measurement in 17 from the measurement in 18. Is the difference 2 inches or less for both? (S7.1.1.5(c)(7))

   14 – 13 = 35 ½ - 35 ½ = 0 inches;

   18 – 17 = 13 ½ - 13 = ½ inch

   Yes – Pass

   No – Fail
20. Subtract the measurement in 14 from the measurement in 10 and the measurement in 18 from the measurement in 10. Is the difference 3 inches or more for both?  

\[
\begin{align*}
10-14 &= 70 \frac{1}{2} - 35 \frac{1}{2} = 35 \text{ inches;} \\
10-18 &= 70 \frac{1}{2} - 13 \frac{1}{2} = 57 \text{ inches}
\end{align*}
\]

Yes – Pass

No – Fail

DATA SHEET 8

LAP BELT LOCKABILITY

Passenger cars, trucks, buses, and multipurpose passenger vehicles with a GVWR of 10,000 pounds or less. (S7.1.1.5)

Test Vehicle: 2009 Kia Borrego  
Test Program: FMVSS 208 Compliance  
Test Technician: Wayne Dahlke

Complete one of these forms for each designated seating position that can be adjusted to forward-facing or that is a forward-facing seat, other than the driver’s seat (S7.1.1.5(a), and that has seat belt retractors that are not solely automatic locking retractors. (S7.1.1.5(c))

DESIGNATED SEATING POSITION: Right Rear Passenger

1. Record test fore-aft seat position: REAR  
(S7.1.1.5(c)(1)) (Any position is acceptable)

2. Does the lap belt portion of the seat belt in the forward-facing seat or seat that can be adjusted to forward-facing consist of a locking device that does NOT have to be attached by the vehicle user to the seat belt webbing, retractor, or any other part of the vehicle. (S7.1.1.5 (a))

   X Yes – Pass  
   □ No – Fail

3. Does the lap belt portion of the seat belt in the forward-facing seat or seat that can be adjusted to forward-facing consist of a locking device that does NOT require inverting, twisting or deforming of the belt webbing. (S7.1.1.5 (a))

   X Yes – Pass  
   □ No – Fail

4. Place any adjustable seat belt anchorage in the lowest adjustment position.

   X N/A The anchorage is not adjustable.

5. Buckle the seat belt. (S7.1.1.5(c)(1))

6. Locate a reference point A on the seat belt buckle. (S7.1.1.5(c)(2))

7. Locate a reference point B on the attachment hardware or retractor assembly at the other end of the lap belt or lap belt portion of the seat belt assembly. (S7.1.1.5(c)(2))

8. Does the vehicle user need to take some action to activate the locking feature on the lap belt portion of the seat belt in any forward-facing seat or seat that can be adjusted to forward-facing?

   X Yes (go to 8.1)  
   □ No (go to 9)

8.1 Does the vehicle owner’s manual include a description in words and/or diagrams describing how to activate the locking feature so that the seat belt assembly can tightly secure a child restraint system and how to deactivate the locking feature to remove the child restraint system. (S7.1.1.5(b))

   X Yes – Pass  
   □ No – Fail

9. Adjust the lap belt or lap belt portion of the seat belt assembly according to any procedures recommended in the vehicle owner’s manual to activate any locking feature so that the webbing between points A and B is at the maximum length allowed by the belt system. (S7.1.1.5(c)(2) & S7.1.1.5(c)(1))

10. Measure and record the distance between points A and B along the longitudinal centerline of the webbing for the lap belt or lap belt portion of the seat belt assembly. (S7.1.1.5(c)(2))

   X Measured distance between A and B (inches): 68 ¼
11. Readjust the belt system so that the webbing between points A and B is at ½ the maximum length of the webbing. (S7.1.1.5(c)(3))

12. To the lap belt or lap belt portion of the seat belt assembly, apply a preload of 10 pounds using the webbing tension pull device in Figure 5. Apply the load in a vertical plane parallel to the longitudinal axis of the vehicle and passing through the seating reference point of the designated seating position. Apply the preload in a horizontal direction toward the front of the vehicle with a force application angle of not less than 5 degrees nor more than 15 degrees above the horizontal. (S7.1.1.5(c)(4))

   Measured force application angle: \(_{10}\_\) (spec. 5 - 15 degrees)

13. Measure the length between points A and B along the longitudinal centerline of the webbing while the preload is being applied. (S7.1.1.5(c)(4))

   Measured distance between A and B: \(43\) inches

14. Increase the load to 50 pounds at a rate of no more than 50 pounds per second. Attain the load in not more than 5 seconds. (If webbing sensitive emergency locking retractors are installed as part of the lap belt or lap belt portion of the seat belt assembly, apply the load at a rate less than the threshold value for lock-up specified by the manufacturer.) Maintain the load for at least 5 seconds. Measure and record the distance between points A and B along the longitudinal centerline of the webbing. (S7.1.1.5(c)(5))

   Record onset rate: \(_{15}_\) lb/sec (spec. 10 to 50 lb/sec) (S7.1.1.5(c)(5))

   Measured distance between A and B: \(43\) \frac{1}{4} inches (S7.1.1.5(c)(6))

15. Let the seat belt webbing retract to its minimum length with the seat belt still buckled.

16. To the lap belt or lap belt portion of the seat belt assembly, apply a preload of 10 pounds using the webbing tension pull device in Figure 5. Apply the load in a vertical plane parallel to the longitudinal axis of the vehicle and passing through the seating reference point of the designated seating position. Apply the preload in a horizontal direction toward the front of the vehicle with a force application angle of not less than 5 degrees nor more than 15 degrees above the horizontal. (S7.1.1.5(c)(4))

   Measured force application angle: \(_{10}_\) (spec. 5 - 15 degrees)

17. Measure the length between points A and B along the longitudinal centerline of the webbing while the preload is being applied. (S7.1.1.5(c)(4))

   Measured distance between A and B: \(20\) inches

18. Increase the load to 50 pounds at a rate of no more than 50 pounds per second. Attain the load in not more than 5 seconds. (If webbing sensitive emergency locking retractors are installed as part of the lap belt or lap belt portion of the seat belt assembly, apply the load at a rate less than the threshold value for lock-up specified by the manufacturer.) Maintain the load for at least 5 seconds. Measure and record the distance between points A and B along the longitudinal centerline of the webbing. (S7.1.1.5(c)(5))

   Record onset rate: \(_{15}_\) lb/sec (spec. 10 to 50 lb/sec) (S7.1.1.5(c)(5))

   Measured distance between A and B: \(20\) \frac{3}{4} inches (S7.1.1.5(c)(6))

19. Subtract the measurement in 13 from the measurement in 14 and the measurement in 17 from the measurement in 18. Is the difference 2 inches or less for both? (S7.1.1.5(c)(7))

   \[14 - 13 = 43 \frac{1}{4} - 43 = \frac{1}{4}\text{ inch};\]
   \[18 - 17 = 20 \frac{3}{4} - 20 = \frac{3}{4}\text{ inch}\]

   Yes – Pass

   No – Fail
20. Subtract the measurement in 14 from the measurement in 10 and the measurement in 18 from the measurement in 10. Is the difference 3 inches or more for both? (S7.1.1.5(c)(8))

\[
\begin{align*}
10-14 &= 68 \frac{1}{4} - 43 \frac{1}{4} = 25 \text{ inches;} \\
10-18 &= 68 \frac{1}{4} - 20 \frac{3}{4} = 47 \frac{1}{2} \text{ inches}
\end{align*}
\]

\[\checkmark\text{ Yes – Pass}\]

\[\text{No – Fail}\]

**Test Program:** FMVSS 208 Compliance

**Test Technician:** Wayne Dahlke

**NHTSA No.:** C90509

**Test Date:** 3/5/09
11. Readjust the belt system so that the webbing between points A and B is at $\frac{1}{2}$ the maximum length of the webbing. (S7.1.1.5(c)(3))

12. To the lap belt or lap belt portion of the seat belt assembly, apply a preload of 10 pounds using the webbing tension pull device in Figure 5. Apply the load in a vertical plane parallel to the longitudinal axis of the vehicle and passing through the seating reference point of the designated seating position. Apply the preload in a horizontal direction toward the front of the vehicle with a force application angle of not less than 5 degrees nor more than 15 degrees above the horizontal. (S7.1.1.5(c)(4))

   Measured force application angle: $\theta = 10^\circ$ (spec. 5 - 15 degrees)

13. Measure the length between points A and B along the longitudinal centerline of the webbing while the preload is being applied. (S7.1.1.5(c)(4))

   Measured distance between A and B: $d = 44 \frac{1}{4}$ inches

14. Increase the load to 50 pounds at a rate of no more than 50 pounds per second. Attain the load in not more than 5 seconds. (If webbing sensitive emergency locking retractors are installed as part of the lap belt or lap belt portion of the seat belt assembly, apply the load at a rate less than the threshold value for lock-up specified by the manufacturer.) Maintain the load for at least 5 seconds. Measure and record the distance between points A and B along the longitudinal centerline of the webbing. (S7.1.1.5(c)(5))

   Record onset rate: $\gamma = 15$ lb/sec (spec. 10 to 50 lb/sec) (S7.1.1.5(c)(5))

   Measured distance between A and B: $d = 44 \frac{1}{2}$ inches (S7.1.1.5(c)(6))

15. Let the seat belt webbing retract to its minimum length with the seat belt still buckled.

16. To the lap belt or lap belt portion of the seat belt assembly, apply a preload of 10 pounds using the webbing tension pull device in Figure 5. Apply the load in a vertical plane parallel to the longitudinal axis of the vehicle and passing through the seating reference point of the designated seating position. Apply the preload in a horizontal direction toward the front of the vehicle with a force application angle of not less than 5 degrees nor more than 15 degrees above the horizontal. (S7.1.1.5(c)(4))

   Measured force application angle: $\theta = 10^\circ$ (spec. 5 - 15 degrees)

17. Measure the length between points A and B along the longitudinal centerline of the webbing while the preload is being applied. (S7.1.1.5(c)(4))

   Measured distance between A and B: $d = 25 \frac{1}{2}$ inches

18. Increase the load to 50 pounds at a rate of no more than 50 pounds per second. Attain the load in not more than 5 seconds. (If webbing sensitive emergency locking retractors are installed as part of the lap belt or lap belt portion of the seat belt assembly, apply the load at a rate less than the threshold value for lock-up specified by the manufacturer.) Maintain the load for at least 5 seconds. Measure and record the distance between points A and B along the longitudinal centerline of the webbing. (S7.1.1.5(c)(5))

   Record onset rate: $\gamma = 15$ lb/sec (spec. 10 to 50 lb/sec) (S7.1.1.5(c)(5))

   Measured distance between A and B: $d = 26$ inches (S7.1.1.5(c)(6))

19. Subtract the measurement in 13 from the measurement in 14 and the measurement in 17 from the measurement in 18. Is the difference 2 inches or less for both? (S7.1.1.5(c)(7))

   $14 - 13 = 44 \frac{1}{2} - 44 \frac{1}{4} = \frac{1}{4}$ inch;
   $18 - 17 = 26 - 25 \frac{1}{2} = \frac{1}{2}$ inch

   Yes – Pass
   No – Fail
20. Subtract the measurement in 14 from the measurement in 10 and the measurement in 18 from the measurement in 10. Is the difference 3 inches or more for both? (S7.1.1.5(c)(8))

10-14 = 72 ¼ - 44 ½ = 27 ¾ inches;
10-18 = 72 ¼ - 26 = 46 ¼ inches

Yes – Pass
No – Fail

DATA SHEET 8

LAP BELT LOCKABILITY

Passenger cars, trucks, buses, and multipurpose passenger vehicles with a GVWR of 10,000 pounds or less. (S7.1.1.5)

Test Vehicle: 2009 Kia Borrego  NHTSA No.: C90509
Test Program: FMVSS 208 Compliance  Test Date: 3/5/09
Test Technician: Wayne Dahlke

Complete one of these forms for each designated seating position that can be adjusted to forward-facing or that is a forward-facing seat, other than the driver’s seat (S7.1.1.5(a), and that has seat belt retractors that are not solely automatic locking retractors. (S7.1.1.5(c))

DESIGNATED SEATING POSITION: Right 3rd Row Passenger

N/A – No retractor is at this position
N/A – The retractor is an automatic locking retractor ONLY

1. Record test fore-aft seat position: FIXED
   (S7.1.1.5(c)(1)) (Any position is acceptable)

2. Does the lap belt portion of the seat belt in the forward-facing seat or seat that can be adjusted to forward-facing consist of a locking device that does NOT have to be attached by the vehicle user to the seat belt webbing, retractor, or any other part of the vehicle. (S7.1.1.5 (a))
   Yes – Pass
   No – Fail

3. Does the lap belt portion of the seat belt in the forward-facing seat or seat that can be adjusted to forward-facing consist of a locking device that does NOT require inverting, twisting or deforming of the belt webbing. (S7.1.1.5 (a))
   Yes – Pass
   No – Fail

4. Place any adjustable seat belt anchorage in the lowest adjustment position.
   N/A The anchorage is not adjustable.

5. Buckle the seat belt. (S7.1.1.5(c)(1))
6. Locate a reference point A on the seat belt buckle. (S7.1.1.5(c)(2))
7. Locate a reference point B on the attachment hardware or retractor assembly at the other end of the lap belt or lap belt portion of the seat belt assembly. (S7.1.1.5(c)(2))

8. Does the vehicle user need to take some action to activate the locking feature on the lap belt portion of the seat belt in any forward-facing seat or seat that can be adjusted to forward-facing?
   Yes (go to 8.1)
   No (go to 9)

8.1 Does the vehicle owner’s manual include a description in words and/or diagrams describing how to activate the locking feature so that the seat belt assembly can tightly secure a child restraint system and how to deactivate the locking feature to remove the child restraint system. (S7.1.1.5(b))
   Yes – Pass
   No – Fail

9. Adjust the lap belt or lap belt portion of the seat belt assembly according to any procedures recommended in the vehicle owner’s manual to activate any locking feature so that the webbing between points A and B is at the maximum length allowed by the belt system. (S7.1.1.5(c)(2) & S7.1.1.5(c)(1))

10. Measure and record the distance between points A and B along the longitudinal centerline of the webbing for the lap belt or lap belt portion of the seat belt assembly. (S7.1.1.5(c)(2))
    Measured distance between A and B (inches): 72

Test Vehicle: 2009 Kia Borrego  NHTSA No.: C90509
Test Program: FMVSS 208 Compliance  Test Date: 3/5/09
Test Technician: Wayne Dahlke

Complete one of these forms for each designated seating position that can be adjusted to forward-facing or that is a forward-facing seat, other than the driver’s seat (S7.1.1.5(a), and that has seat belt retractors that are not solely automatic locking retractors. (S7.1.1.5(c))
11. Readjust the belt system so that the webbing between points A and B is at \( \frac{1}{2} \) the maximum length of the webbing. (S7.1.1.5(c)(3))

12. To the lap belt or lap belt portion of the seat belt assembly, apply a preload of 10 pounds using the webbing tension pull device in Figure 5. Apply the load in a vertical plane parallel to the longitudinal axis of the vehicle and passing through the seating reference point of the designated seating position. Apply the preload in a horizontal direction toward the front of the vehicle with a force application angle of not less than 5 degrees nor more than 15 degrees above the horizontal. (S7.1.1.5(c)(4))

- Measured force application angle: 10° (spec. 5 - 15 degrees)

13. Measure the length between points A and B along the longitudinal centerline of the webbing while the preload is being applied. (S7.1.1.5(c)(4))

- Measured distance between A and B: 47 ¼ inches

14. Increase the load to 50 pounds at a rate of no more than 50 pounds per second. Attain the load in not more than 5 seconds. (If webbing sensitive emergency locking retractors are installed as part of the lap belt or lap belt portion of the seat belt assembly, apply the load at a rate less than the threshold value for lock-up specified by the manufacturer.) Maintain the load for at least 5 seconds. Measure and record the distance between points A and B along the longitudinal centerline of the webbing. (S7.1.1.5(c)(5))

- Measured distance between A and B: 47 ½ inches

- Record onset rate: 15 lb/sec (spec. 10 to 50 lb/sec) (S7.1.1.5(c)(5))

15. Let the seat belt webbing retract to its minimum length with the seat belt still buckled.

16. To the lap belt or lap belt portion of the seat belt assembly, apply a preload of 10 pounds using the webbing tension pull device in Figure 5. Apply the load in a vertical plane parallel to the longitudinal axis of the vehicle and passing through the seating reference point of the designated seating position. Apply the preload in a horizontal direction toward the front of the vehicle with a force application angle of not less than 5 degrees nor more than 15 degrees above the horizontal. (S7.1.1.5(c)(4))

- Measured force application angle: 10° (spec. 5 - 15 degrees)

17. Measure the length between points A and B along the longitudinal centerline of the webbing while the preload is being applied. (S7.1.1.5(c)(4))

- Measured distance between A and B: 26 ¼ inches

18. Increase the load to 50 pounds at a rate of no more than 50 pounds per second. Attain the load in not more than 5 seconds. (If webbing sensitive emergency locking retractors are installed as part of the lap belt or lap belt portion of the seat belt assembly, apply the load at a rate less than the threshold value for lock-up specified by the manufacturer.) Maintain the load for at least 5 seconds. Measure and record the distance between points A and B along the longitudinal centerline of the webbing. (S7.1.1.5(c)(5))

- Measured distance between A and B: 27 inches

- Record onset rate: 15 lb/sec (spec. 10 to 50 lb/sec) (S7.1.1.5(c)(5))

19. Subtract the measurement in 13 from the measurement in 14 and the measurement in 17 from the measurement in 18. Is the difference 2 inches or less for both? (S7.1.1.5(c)(7))

- 14 – 13 = 47 ½ - 47 ¼ = \( \frac{1}{4} \) inch;
- 18 – 17 = 27 – 26 ¼ = \( \frac{3}{4} \) inch

- Yes – Pass
- No – Fail
20. Subtract the measurement in 14 from the measurement in 10 and the measurement in 18 from the measurement in 10. Is the difference 3 inches or more for both? (S7.1.1.5(c)(8))

- 10-14 = 72 – 47 ½ = 24 ½ inches;
- 10-18 = 72 – 27 = 45 inches

X Yes – Pass
X No – Fail

DATA SHEET 9
FMVSS 208 SEAT BELT WARNING SYSTEM CHECK (S7.3)

Test Vehicle: 2009 Kia Borrego
Test Program: FMVSS 208 Compliance
Test Technician: Wayne Dahlke

X 1. The occupant is in the driver’s seat.
X 2. The seat belt is in the stowed position.
X 3. The key is in the “on” or “start” position.
X 4. The time duration of the audible signal beginning with key “on” or “start” is 6 seconds.
X 5. The occupant is in the driver’s seat.
X 6. The seat belt is in the stowed position.
X 7. The key is in the “on” or “start” position.
X 8. The time duration of the warning light beginning with key “on” or “start” is 6 seconds.
X 9. The occupant is in the driver’s seat.
X 10. The seat belt is in the latched position and with at least 4 inches of belt webbing extended.
X 11. The key is in the “on” or “start” position.
X 12. The time duration of the warning light beginning with key “on” or “start” is 6 seconds.
X 13. Complete the following table with the data from 4, 8, and 12 to determine which option is used.

| S7.3 (a)(1) Belt stowed & key on or start | Item 8: 6 | 60 seconds minimum | Item 4: 6 | 4 to 8 seconds |
| S7.3 (a)(2) Belt latched & key on or start | Item 12: 6 | 4 to 8 seconds |
| Belt stowed & key on or start | Item 8: 6 | 4 to 8 seconds | Item 4: 6 | 4 to 8 seconds |

* 49 USCS @ 30124 does NOT allow an audible signal to operate for more than 8 seconds.
A voluntary audible signal after the 4 to 8 second required signal may be provided. It must be differentiated from the required signal (5/25/2001 legal interpretation to Longacre and Associates).

X 14. The seat belt warning system meets the requirements of (manufacturers may comply with either section)
    | S7.3 (a)(1) |
    | X S7.3 (a)(2) |
    | FAIL – Does NOT meet the requirements of either option |

X 15. Note wording of visual warning: (S7.3(a)(1) and S7.3(a)(2))
    | Fasten Seat Belts |
    | Fasten Belts |
    | Symbol 101 -  |
    | FAIL – Does not use any of the above wording or symbol |

I certify that I have read and performed each instruction.

DATA SHEET 10
BELT CONTACT FORCE (S7.4.3)

Test Vehicle: 2009 Kia Borrego  
Test Program: FMVSS 208 Compliance  
Test Technician: Wayne Dahlke  
NHTSA No.: C90509  
Test Date: 3/5/09

Test all Type 2 seat belts other than those in walk-in van-type vehicles and those at front outboard designated seating positions in passenger cars. Complete a form for each applicable seat belt.

### DESIGNATED SEATING POSITION: Left Front Driver

1. Does the vehicle incorporate a webbing tension-relieving device?
   - Yes (this form is complete)
   - No (continue with this check sheet)

2. Position the seat’s adjustable lumbar supports so that the lumbar support is in its lowest, retracted or deflated adjustment position. (S8.1.3)
   - N/A – No lumbar adjustment

3. Position any adjustable parts of the seat that provide additional support so that they are in the lowest or most open adjustment position. (S16.2.10.2)
   - N/A – No additional support adjustment

4. Is the fore-aft position of the seat adjustable?
   - No – go to 5
   - Yes – go to 4.1

4.1 Use all the seat controls that have any affect on the fore-aft movement of the seat to move the seat cushion to the rearmost position. **Mark** this position. (8/31/95 legal interp to Hogan and Hartson)

4.2 Use all the seat controls that have any affects on the fore-aft movement of the seat to move the seat cushion to the foremost position. **Mark** this position. (8/31/95 legal interp to Hogan and Hartson)

4.3 **Mark** each fore-aft position so that there is a visual indication when the seat is at a particular position. For manual seats, **mark** each detent. For power seats, mark only the rearmost, middle and foremost positions. Label three of the positions with the following: F for foremost, M for mid-position (if there is no mid-position, label the closest adjustment position to the rear of the mid-point), and R for rearmost. Determine the mid fore-aft seat position based on the foremost and rearmost positions determined in items 4.1 and 4.2. (8/31/95 legal interp to Hogan and Hartson)

4.4 Move the seat to the mid position.

4.5 While maintaining the mid position, move the seat to its lowest position. For seats with adjustable seat cushions, use the manufacturer’s recommended seat cushion angle for determining the lowest height position.

5. Is the seat back angle adjustable?
   - No- go to 6
   - Yes- go to 5.1

5.1 Set and mark seat back angle, if adjustable, at the manufacturer’s nominal design riding position for a 50th percentile adult male in the manner specified by the manufacturer.
   - N/A – No seat back angle adjustment
   - Manufacturer’s design seat back angle: 5° on Headrest Post
   - Tested seat back angle: 5° on Headrest Post
6. Is the seat a bucket seat?
   Yes, go to 6.1 and skip 6.2
   No, go to 6.2 and skip 6.1

6.1 Bucket seats:
   Locate and mark the longitudinal centerline of the seat cushion. The intersection of
   the vertical longitudinal plane that passes through the SgRP and the seat cushion
   upper surface determines the longitudinal centerline of a bucket seat cushion.
   (S10.4.1.2 and S16.3.1.10)

6.2 Bench seats (complete ONLY the one that is applicable to the seat being tested):

6.2.1 Driver Seat
   Locate and mark the longitudinal line on the seat cushion that marks the intersection
   of the vertical longitudinal plane through the centerline of the steering wheel and the
   seat cushion upper surface. (S10.4.1.1)

6.2.2 Front Outboard Passenger Seat
   Locate and mark the longitudinal centerline of the passenger seat cushion. The
   longitudinal centerline is the same distance from the longitudinal centerline of the vehicle
   as the center of the steering wheel. (S10.4.1.1)
   Record the distance from the longitudinal centerline of the vehicle to the center of the
   steering wheel. __________
   Record the distance from the longitudinal centerline of the vehicle to the longitudinal
   centerline of the seat cushion. ________

6.2.3 Rear designated seating positions
   Locate and mark the longitudinal centerline of the seat cushion. The intersection of
   the vertical longitudinal plane that passes through the SgRP and the seat cushion upper
   surface determines the longitudinal centerline.

7. Position the test dummies according to dummy position placement instructions in
   Appendix F. Complete the Appendix F check sheets, but include them in the test
   report ONLY if there is a test failure.

8. Fasten the seat belt latch.

9. Pull either 12 inches of belt webbing or the maximum available amount of belt webbing,
   whichever is less, from the retractor and then release it, allowing the belt webbing to
   return to the dummy's chest.

10. Locate the point where the centerline of the upper torso belt webbing crosses the
    midsagittal line on the dummy's chest. At that point pull the belt webbing out 3 inches
    from the dummy's chest and release until it is within one inch from the dummy's chest.
    (S10.8) Using a force measuring gage with a full scale range of no more than 1.5
    pounds, measure the contact force perpendicular to the dummy's chest exerted by the
    belt webbing.
    Contact Force (lb): 0.5
    0.0 to 0.7 pounds – Pass
    Greater than 0.7 pounds - FAIL

REMARKS:

I certify that I have read and performed each instruction.

DATA SHEET 10
BELT CONTACT FORCE (S7.4.3)

Test Vehicle: 2009 Kia Borrego  
Test Program: FMVSS 208 Compliance  
Test Technician: Wayne Dahlke  
NHTSA No.: C90509  
Test Date: 3/5/09

Test all Type 2 seat belts other than those in walk-in van-type vehicles and those at front outboard designated seating positions in passenger cars. Complete a form for each applicable seat belt.

DESIGNATED SEATING POSITION: Center Rear Passenger

1. Does the vehicle incorporate a webbing tension-relieving device?
   - Yes (this form is complete)
   - No (continue with this check sheet)

2. Position the seat’s adjustable lumbar supports so that the lumbar support is in its lowest, retracted or deflated adjustment position. (S8.1.3)
   - N/A – No lumbar adjustment

3. Position any adjustable parts of the seat that provide additional support so that they are in the lowest or most open adjustment position. (S16.2.10.2)
   - N/A – No additional support adjustment

4. Is the fore-aft position of the seat adjustable?
   - No – go to 5
   - Yes – go to 4.1

4.1 Use all the seat controls that have any affect on the fore-aft movement of the seat to move the seat cushion to the rearmost position. Mark this position. (8/31/95 legal interp to Hogan and Hartson)

4.2 Use all the seat controls that have any affects on the fore-aft movement of the seat to move the seat cushion to the foremost position. Mark this position. (8/31/95 legal interp to Hogan and Hartson)

4.3 Mark each fore-aft position so that there is a visual indication when the seat is at a particular position. For manual seats, mark each detent. For power seats, mark only the rearmost, middle and foremost positions. Label three of the positions with the following: F for foremost, M for mid-position (if there is no mid-position, label the closest adjustment position to the rear of the mid-point), and R for rearmost. Determine the mid fore-aft seat position based on the foremost and rearmost positions determined in items 4.1 and 4.2. (8/31/95 legal interp to Hogan and Hartson)

4.4 Move the seat to the mid position.

4.5 While maintaining the mid position, move the seat to its lowest position. For seats with adjustable seat cushions, use the manufacturer’s recommended seat cushion angle for determining the lowest height position.

5. Is the seat back angle adjustable?
   - No- go to 6
   - Yes- go to 5.1

5.1 Set and mark seat back angle, if adjustable, at the manufacturer’s nominal design riding position for a 50th percentile adult male in the manner specified by the manufacturer.
   - N/A – No seat back angle adjustment
   - Manufacturer’s design seat back angle: 10° on Headrest Post
   - Tested seat back angle: 10° on Headrest Post

Test Vehicle: 2009 Kia Borrego  
Test Program: FMVSS 208 Compliance  
Test Technician: Wayne Dahlke  
NHTSA No.: C90509  
Test Date: 3/5/09
6. Is the seat a bucket seat?
   - Yes, go to 6.1 and skip 6.2
   - No, go to 6.2 and skip 6.1

6.1 Bucket seats:
   - Locate and mark the longitudinal centerline of the seat cushion. The intersection of the vertical longitudinal plane that passes through the SgRP and the seat cushion upper surface determines the longitudinal centerline of a bucket seat cushion. (S10.4.1.2 and S16.3.1.10)

6.2 Bench seats (complete ONLY the one that is applicable to the seat being tested):
   6.2.1 Driver Seat
   - Locate and mark the longitudinal line on the seat cushion that marks the intersection of the vertical longitudinal plane through the centerline of the steering wheel and the seat cushion upper surface. (S10.4.1.1)

   6.2.2 Front Outboard Passenger Seat
   - Locate and mark the longitudinal centerline of the passenger seat cushion. The longitudinal centerline is the same distance from the longitudinal centerline of the vehicle as the center of the steering wheel. (S10.4.1.1)
   - Record the distance from the longitudinal centerline of the vehicle to the center of the steering wheel. ________
   - Record the distance from the longitudinal centerline of the vehicle to the longitudinal centerline of the seat cushion. ________

   6.2.3 Rear designated seating positions
   - Locate and mark the longitudinal centerline of the seat cushion. The intersection of the vertical longitudinal plane that passes through the SgRP and the seat cushion upper surface determines the longitudinal centerline.

7. Position the test dummies according to dummy position placement instructions in Appendix F. Complete the Appendix F check sheets, but include them in the test report ONLY if there is a test failure.

8. Fasten the seat belt latch.

9. Pull either 12 inches of belt webbing or the maximum available amount of belt webbing, whichever is less, from the retractor and then release it, allowing the belt webbing to return to the dummy's chest.

10. Locate the point where the centerline of the upper torso belt webbing crosses the midsagittal line on the dummy's chest. At that point pull the belt webbing out 3 inches from the dummy's chest and release until it is within one inch from the dummy's chest. (S10.8) Using a force measuring gage with a full scale range of no more than 1.5 pounds, measure the contact force perpendicular to the dummy's chest exerted by the belt webbing.
    - Contact Force (lb): 0.6
    - 0.0 to 0.7 pounds – Pass
    - Greater than 0.7 pounds - FAIL

REMARKS:
I certify that I have read and performed each instruction.

| X 4.3 Mark each fore-aft position so that there is a visual indication when the seat is at a particular position. For manual seats, mark each detent. For power seats, mark only the rearmost, middle and foremost positions. Label three of the positions with the following: F for foremost, M for mid-position (if there is no mid-position, label the closest adjustment position to the rear of the mid-point), and R for rearmost. Determine the mid fore-aft seat position based on the foremost and rearmost positions determined in items 4.1 and 4.2. (8/31/95 legal interp to Hogan and Hartson) |
| X 4.4 Move the seat to the mid position. |
| X 4.5 While maintaining the mid position, move the seat to its lowest position. For seats with adjustable seat cushions, use the manufacturer’s recommended seat cushion angle for determining the lowest height position. |
| X 5. Is the seat back angle adjustable? |
| ☒ No- go to 6  
| ☒ Yes- go to 5.1 |
| X 5.1 Set and mark seat back angle, if adjustable, at the manufacturer’s nominal design riding position for a 50th percentile adult male in the manner specified by the manufacturer. |
| ☒ N/A – No seat back angle adjustment  
| ✗ Manufacturer's design seat back angle: 10° on Headrest Post  
| ✗ Tested seat back angle: 10° on Headrest Post |

Test Vehicle: 2009 Kia Borrego  
Test Program: FMVSS 208 Compliance  
Test Technician: Wayne Dahlke

Test all Type 2 seat belts other than those in walk-in van-type vehicles and those at front outboard designated seating positions in passenger cars. Complete a form for each applicable seat belt.

DESIGNATED SEATING POSITION: Right Rear Passenger

1. Does the vehicle incorporate a webbing tension-relieving device?
   - Yes (this form is complete)
   - No (continue with this check sheet)

2. Position the seat's adjustable lumbar supports so that the lumbar support is in its lowest, retracted or deflated adjustment position. (S8.1.3)
   - N/A – No lumbar adjustment

3. Position any adjustable parts of the seat that provide additional support so that they are in the lowest or most open adjustment position. (S16.2.10.2)
   - N/A – No additional support adjustment

4. Is the fore-aft position of the seat adjustable?
   - No – go to 5
   - Yes – go to 4.1

4.1 Use all the seat controls that have any affect on the fore-aft movement of the seat to move the seat cushion to the rearmost position. Mark this position. (8/31/95 legal interp to Hogan and Hartson)

4.2 Use all the seat controls that have any affects on the fore-aft movement of the seat to move the seat cushion to the foremost position. Mark this position. (8/31/95 legal interp to Hogan and Hartson)

4.3 Mark each fore-aft position so that there is a visual indication when the seat is at a particular position. For manual seats, mark each detent. For power seats, mark only the rearmost, middle and foremost positions. Label three of the positions with the following: F for foremost, M for mid-position (if there is no mid-position, label the closest adjustment position to the rear of the mid-point), and R for rearmost. Determine the mid fore-aft seat position based on the foremost and rearmost positions determined in items 4.1 and 4.2. (8/31/95 legal interp to Hogan and Hartson)

4.4 Move the seat to the mid position.

4.5 While maintaining the mid position, move the seat to its lowest position. For seats with adjustable seat cushions, use the manufacturer’s recommended seat cushion angle for determining the lowest height position.

5. Is the seat back angle adjustable?
   - No- go to 6
   - Yes- go to 5.1

5.1 Set and mark seat back angle, if adjustable, at the manufacturer’s nominal design riding position for a 50th percentile adult male in the manner specified by the manufacturer.
   - N/A – No seat back angle adjustment
   - Manufacturer's design seat back angle: 10° on Headrest Post
   - Tested seat back angle: 10° on Headrest Post
6. Is the seat a bucket seat?
   Yes, go to 6.1 and skip 6.2
   No, go to 6.2 and skip 6.1

6.1 Bucket seats:
   Locate and mark the longitudinal centerline of the seat cushion. The intersection of
   the vertical longitudinal plane that passes through the SgRP and the seat cushion
   upper surface determines the longitudinal centerline of a bucket seat cushion.
   (S10.4.1.2 and S16.3.1.10)

6.2 Bench seats (complete ONLY the one that is applicable to the seat being tested):
   6.2.1 Driver Seat
   Locate and mark the longitudinal line on the seat cushion that marks the intersection
   of the vertical longitudinal plane through the centerline of the steering wheel and the
   seat cushion upper surface. (S10.4.1.1)

   6.2.2 Front Outboard Passenger Seat
   Locate and mark the longitudinal centerline of the passenger seat cushion. The
   longitudinal centerline is the same distance from the longitudinal centerline of the vehicle
   as the center of the steering wheel. (S10.4.1.1)
   Record the distance from the longitudinal centerline of the vehicle to the center of the
   steering wheel. __________
   Record the distance from the longitudinal centerline of the vehicle to the longitudinal
   centerline of the seat cushion. __________

   6.2.3 Rear designated seating positions
   Locate and mark the longitudinal centerline of the seat cushion. The intersection of
   the vertical longitudinal plane that passes through the SgRP and the seat cushion upper
   surface determines the longitudinal centerline.

7. Position the test dummies according to dummy position placement instructions in
   Appendix F. Complete the Appendix F check sheets, but include them in the test
   report ONLY if there is a test failure.

8. Fasten the seat belt latch.

9. Pull either 12 inches of belt webbing or the maximum available amount of belt webbing,
   whichever is less, from the retractor and then release it, allowing the belt webbing to
   return to the dummy's chest.

10. Locate the point where the centerline of the upper torso belt webbing crosses the
    midsagittal line on the dummy's chest. At that point pull the belt webbing out 3 inches
    from the dummy's chest and release until it is within one inch from the dummy's chest.
    (S10.8) Using a force measuring gage with a full scale range of no more than 1.5
    pounds, measure the contact force perpendicular to the dummy's chest exerted by the
    belt webbing.

    Contact Force (lb): 0.5
    0.0 to 0.7 pounds – Pass
    Greater than 0.7 pounds - FAIL

REMARKS:

I certify that I have read and performed each instruction.

Test all front outboard seat belts other than those in walk-in van-type vehicles and those at front outboard designated seating positions in passenger cars. Complete a form for each applicable seat belt.

**DESIGNATED SEATING POSITION:** Left Front Driver

1. **Position the seat's adjustable lumbar supports so that the lumbar support is in its lowest, retracted or deflated adjustment position. (S8.1.3)**
   - N/A – No lumbar adjustment

2. **Position any adjustable parts of the seat that provide additional support so that they are in the lowest or most open adjustment position. (S16.2.10.2)**
   - N/A – No additional support adjustment

3. **Is the fore-aft position of the seat adjustable?**
   - No – go to 4
   - Yes – go to 3.1

3.1 **Use all the seat controls that have any affect on the fore-aft movement of the seat to move the seat cushion to the rearmost position. Mark this position. (8/31/95 legal interp to Hogan and Hartson)**

3.2 **While maintaining the forward most position, move the seat to its lowest position.** For seats with adjustable seat cushions, use the manufacturer’s recommended seat cushion angle for determining the lowest height position.

4. **Is the seat back angle adjustable?**
   - No- go to 5
   - Yes- go to 4.1

4.1 **Set and mark seat back angle, if adjustable, at the manufacturer’s nominal design riding position for a 50th percentile adult male in the manner specified by the manufacturer.**
   - N/A – No seat back angle adjustment
   - Manufacturer’s design seat back angle: 5° on Headrest Post
   - Tested seat back angle: 5° on Headrest Post

5. **Is the seat a bucket seat?**
   - Yes, go to 5.1 and skip 5.2
   - No, go to 5.2 and skip 5.1

5.1 **Bucket seats:**
   - Locate and mark the longitudinal centerline of the seat cushion. The intersection of the vertical longitudinal plane that passes through the SgRP and the seat cushion upper surface determines the longitudinal centerline of a bucket seat cushion. (S10.4.1.2 and S16.3.1.10)

5.2 **Bench seats (complete ONLY the one that is applicable to the seat being tested):**
   5.2.1 **Driver Seat**
      - Locate and mark the longitudinal line on the seat cushion that marks the intersection of the vertical longitudinal plane through the centerline of the steering wheel and the seat cushion upper surface. (S10.4.1.1)
5.2.2 Front Outboard Passenger Seat

Locate and mark the longitudinal centerline of the passenger seat cushion. The longitudinal centerline is the same distance from the longitudinal centerline of the vehicle as the center of the steering wheel. (§10.4.1.1)

Record the distance from the longitudinal centerline of the vehicle to the center of the steering wheel. __________

Record the distance from the longitudinal centerline of the vehicle to the longitudinal centerline of the seat cushion. __________

6. Position the test dummy using the procedures in Appendix F. (Some modifications to the positioning procedure may need to be made because the seat is in the forward most position. Note on the Appendix F positioning check sheet any deviations necessary to position the Part 572, Subpart E dummy). Complete the Appendix F check sheets, but include them in the test report ONLY if there is a test failure.

7. Position the adjustable seat belt anchorage in the manufacturer’s nominal design position for a 50th percentile adult male occupant.

8. Attach the inboard reach string to the base of the head following the instructions on Figure 3.

9. Attach the outboard reach string to the torso sheath following the instructions on Figure 3.

10. Place the latch plate in the stowed position.

11. Extend the inboard reach string in front of the dummy and then backward and outboard to the latch plate to generate arcs of the reach envelope of the test dummy's arms. Is the latch plate within the reach envelope?

   X Yes – Pass
   No

12. Extend the outboard reach string in front of the dummy and then backward and outboard to the latch plate to generate arcs of the reach envelope of the test dummy's arms. Is the latch plate within the reach envelope?

   X Yes – Pass
   No

13. Is the latch plate within the inboard (item 11) or outboard (item 12) reach envelope?

   X Yes – Pass
   No – Fail

14. Using the clearance test block, specified in Figure 4, is there sufficient clearance between the vehicle seat and the side of vehicle interior to allow the test block to move unhindered to the latch plate or buckle?

   X Yes – Pass
   No – Fail

REMARKS:

I certify that I have read and performed each instruction.

Test all front outboard seat belts, except those in walk-in van-type vehicles and those at front outboard designated seating positions in passenger cars. Complete a form for each applicable seat belt.

DESIGNATED SEATING POSITION: Left Front Driver

1. Is the vehicle a passenger car or walk-in van-type vehicle?
   - Yes, this form is complete
   - No

2. Position the seat’s adjustable lumbar supports so that the lumbar support is in its lowest, retracted or deflated adjustment position. (S8.1.3)
   - N/A – No lumbar adjustment

3. Position any adjustable parts of the seat that provide additional support so that they are in the lowest or most open adjustment position. (S16.2.10.2)
   - N/A – No additional support adjustment

4. Is the fore-aft position of the seat adjustable?
   - No – go to 5
   - Yes – go to 4.1

4.1 Use all the seat controls that have any affect on the fore-aft movement of the seat to move the seat cushion to the rearmost position. Mark this position. (8/31/95 legal interp to Hogan and Hartson)

4.2 Use all the seat controls that have any affects on the fore-aft movement of the seat to move the seat cushion to the foremost position. Mark this position. (8/31/95 legal interp to Hogan and Hartson)

4.3 Mark each fore-aft position so that there is a visual indication when the seat is at a particular position. For manual seats, mark each detent. For power seats, mark only the rearmost, middle and foremost positions. Label three of the positions with the following: F for foremost, M for mid-position (if there is no mid-position, label the closest adjustment position to the rear of the mid-point), and R for rearmost. Determine the mid fore-aft seat position based on the foremost and rearmost positions determined in items 4.1 and 4.2. (8/31/95 legal interp to Hogan and Hartson)

4.4 Move the seat to the mid position.

4.5 While maintaining the mid position, move the seat to its lowest position. For seats with adjustable seat cushions, use the manufacturer’s recommended seat cushion angle for determining the lowest height position.

5. Is the seat back angle adjustable?
   - No- go to 6
   - Yes- go to 5.1

5.1 Set and mark seat back angle, if adjustable, at the manufacturer’s nominal design riding position for a 50th percentile adult male in the manner specified by the manufacturer.
   - N/A – No seat back angle adjustment
   - Manufacturer’s design seat back angle: 5° on Headrest Post
   - Tested seat back angle: 5° on Headrest Post

6. Is the seat a bucket seat?
   - Yes, go to 6.1 and skip 6.2
   - No, go to 6.2 and skip 6.1

6.1 Bucket Seats:
   Locate and mark the longitudinal centerline of the seat cushion. The intersection of the vertical longitudinal plane that passes through the SgRP and the seat cushion upper surface determines the longitudinal centerline of a bucket seat cushion. (S10.4.1.2 and S16.3.1.10)
6.2 Bench seats (complete ONLY the one that is applicable to the seat being tested):

6.2.1 Driver Seat
Locate and mark the longitudinal line on the seat cushion that marks the intersection of the vertical longitudinal plane through the centerline of the steering wheel and the seat cushion upper surface. (S10.4.1.1)

6.2.2 Front Outboard Passenger Seat
Locate and mark the longitudinal centerline of the passenger seat cushion. The longitudinal centerline is the same distance from the longitudinal centerline of the vehicle as the center of the steering wheel. (S10.4.1.1)

Record the distance from the longitudinal centerline of the vehicle to the center of the steering wheel. _________

Record the distance from the longitudinal centerline of the vehicle to the longitudinal centerline of the seat cushion. ________

7. Position the Part 572 Subpart E test dummy according to dummy position placement instructions in Appendix F. Complete the Appendix F check sheets, but include them in the test report ONLY if there is a test failure.

8. Fasten the seat belt around the dummy.

9. Remove all slack from the lap belt portion. (S10.9)

N/A, the seat does not have a fore-aft adjustment

10. Pull the upper torso webbing out of the retractor and allow it to retract; repeat this four times. (S10.9)

11. Apply a 2 to 4 pound tension load to the lap belt. (S10.9)

Pound load applied: 3 lb

12. Is the belt system equipped with a tension relieving device?

Yes, continue

No, go to 14

13. Introduce the maximum amount of slack into the upper torso belt that is recommended by the vehicle manufacturer in the vehicle owner’s manual. (S10.9).

14. Check the statement that applies to this test vehicle:

14.1 The torso and lap belt webbing of the seat belt system automatically retracts to a stowed position when the adjacent vehicle door is in an open position and the seat belt latch plate is released.

Yes – Pass go to 16

No – go to 11.2

14.2 The torso and lap belt webbing of the seat belt system automatically retracts when the seat belt latch plate is released.

Yes – Pass go to 15

No – go to 14.3

14.3 Neither 14.1 nor 14.2 apply.

Fail

15. With the webbing and hardware in the stowed position are the webbing and hardware prevented from being pinched when the door is closed?

Yes – Pass

No – Fail

16. If this test vehicle has an open body (without doors) and has a belt system with a tension relieving device, does the belt system fully retract when the tension-relieving device is deactivated?

N/A – Not an open body vehicle

Yes – Pass

No – Fail

X No, go to 6.2 and skip 6.1 |
| 6.1 Bucket Seats: |  
Locate and mark the longitudinal centerline of the seat cushion. The intersection of the vertical longitudinal plane that passes through the SgRP and the seat cushion upper surface determines the longitudinal centerline of a bucket seat cushion. (S10.4.1.2 and S16.3.1.10) |
6.2 Bench seats (complete ONLY the one that is applicable to the seat being tested):

6.2.1 Driver Seat
Locate and mark the longitudinal line on the seat cushion that marks the intersection of the vertical longitudinal plane through the centerline of the steering wheel and the seat cushion upper surface. (S10.4.1.1)

6.2.2 Front Outboard Passenger Seat
Locate and mark the longitudinal centerline of the passenger seat cushion. The longitudinal centerline is the same distance from the longitudinal centerline of the vehicle as the center of the steering wheel. (S10.4.1.1)

Record the distance from the longitudinal centerline of the vehicle to the center of the steering wheel. ________
Record the distance from the longitudinal centerline of the vehicle to the longitudinal centerline of the seat cushion. ________

7. Position the Part 572 Subpart E test dummy according to dummy position placement instructions in Appendix F. Complete the Appendix F check sheets, but include them in the test report ONLY if there is a test failure.

8. Fasten the seat belt around the dummy.

9. Remove all slack from the lap belt portion. (S10.9)
N/A, the seat does not have a fore-aft adjustment

10. Pull the upper torso webbing out of the retractor and allow it to retract; repeat this four times. (S10.9)

11. Apply a 2 to 4 pound tension load to the lap belt. (S10.9)
Pound load applied: 3 lb

12. Is the belt system equipped with a tension relieving device?
Yes, continue
No, go to 14

13. Introduce the maximum amount of slack into the upper torso belt that is recommended by the vehicle manufacturer in the vehicle owner's manual. (S10.9).

14. Check the statement that applies to this test vehicle:
14.1 The torso and lap belt webbing of the seat belt system automatically retracts to a stowed position when the adjacent vehicle door is in an open position and the seat belt latch plate is released.
Yes – Pass go to 16
No – go to 11.2

14.2 The torso and lap belt webbing of the seat belt system automatically retracts when the seat belt latch plate is released.
Yes – Pass go to 15
No – go to 14.3

14.3 Neither 14.1 nor 14.2 apply.
Fail

15. With the webbing and hardware in the stowed position are the webbing and hardware prevented from being pinched when the door is closed?
Yes – Pass
No – Fail

16. If this test vehicle has an open body (without doors) and has a belt system with a tension relieving device, does the belt system fully retract when the tension-relieving device is deactivated?
N/A – Not an open body vehicle
Yes – Pass
No – Fail

DATA SHEET 13
SEAT BELT GUIDES AND HARDWARE (S7.4.6)

Test Vehicle: 2009 Kia Borrego  NHTSA No.: C90509
Test Program: FMVSS 208 Compliance  Test Date: 3/5/09
Test Technician: Wayne Dahlke

Test seat belts except those in walk-in van-type vehicles and those at front outboard designated seating positions in passenger cars. Complete a form for each applicable seat belt.

DESIGNATED SEATING POSITION: Left Front Driver

1. Is the seat cushion movable so that the seat back serves a function other than seating? (S7.4.6.1 (b))
   - Yes, this form is complete
   - No, go to 2

2. Is the seat removable? (S7.4.6.1(b))
   - Yes, this form is complete
   - No, go to 3

3. Is the seat movable so that the space formerly occupied by the seat can be used for a secondary function? (S7.4.6.1(b))
   - Yes, this form is complete
   - No, go to 4

4. Is the webbing designed to pass through the seat cushion or between the seat cushion and seat back? (S7.4.6.1(a))
   - Yes, go to 5
   - No, this form is complete

5. Does one of the following three parts, the seat belt latch plate, the buckle, or the seat belt webbing, stay on top of or above the seat cushion under normal conditions (i.e., conditions other than when belt hardware is intentionally pushed behind the seat by a vehicle occupant)? (S7.4.6.1(a))
   - Yes – Pass
   - No – Fail
   - Identify the part(s) on top or above the seat.
   - Seat belt latch plate
   - Buckle
   - Seat belt webbing

6. Are the remaining two seat belt parts accessible under normal conditions?
   - Yes – Pass
   - No – Fail

7. The buckle and latch plate do not pass through the guides or conduits provided and fall behind the seat when the belt is completely retracted or, if the belt is nonretractable, the belt is unlatched. (S7.4.6.2)
   - Yes – Pass
   - No – Fail

8. The buckle and latch plate do not pass through the guides or conduits provided and fall behind the seat when the seat is moved to any position to which it is designed to be adjusted. (S7.4.6.2)
   - Yes – Pass
   - No – Fail

9. The buckle and latch plate do not pass through the guides or conduits provided and fall behind the seat when the seat back, if foldable, is folded forward as far as possible and then moved backward into position. (S7.4.6.2)
   - Yes – Pass
   - No – Fail

10. Is the inboard receptacle end of the seat belt assembly, installed in the front outboard designated seating position, accessible with the center armrest in any position to which it can be adjusted (without moving the armrest)? (S7.4.6.2)
    - Yes – Pass
    - No – Fail
    - N/A – Rear seat

REMARKS:

DATA SHEET 13
SEAT BELT GUIDES AND HARDWARE (S7.4.6)

Test Vehicle: 2009 Kia Borrego  
NHTSA No.: C90509  
Test Program: FMVSS 208 Compliance  
Test Date: 3/5/09  
Test Technician: Wayne Dahlke

Test seat belts except those in walk-in van-type vehicles and those at front outboard designated seating positions in passenger cars. Complete a form for each applicable seat belt.

DESIGNATED SEATING POSITION: Right 3rd Row Passenger

1. Is the seat cushion movable so that the seat back serves a function other than seating? (S7.4.6.1(b))
   - Yes, this form is complete  
   - No, go to 2

2. Is the seat removable? (S7.4.6.1(b))
   - Yes, this form is complete  
   - No, go to 3

3. Is the seat movable so that the space formerly occupied by the seat can be used for a secondary function? (S7.4.6.1(b))
   - Yes, this form is complete  
   - No, go to 4

4. Is the webbing designed to pass through the seat cushion or between the seat cushion and seat back? (S7.4.6.1(a))
   - Yes, go to 5  
   - No, this form is complete

5. Does one of the following three parts, the seat belt latch plate, the buckle, or the seat belt webbing, stay on top of or above the seat cushion under normal conditions (i.e., conditions other than when belt hardware is intentionally pushed behind the seat by a vehicle occupant)? (S7.4.6.1(a))
   - Yes – Pass  
   - No – Fail
   - Identify the part(s) on top or above the seat.
   - Seat belt latch plate  
   - Buckle  
   - Seat belt webbing

6. Are the remaining two seat belt parts accessible under normal conditions?
   - Yes – Pass  
   - No – Fail

7. The buckle and latch plate do not pass through the guides or conduits provided and fall behind the seat when the belt is completely retracted or, if the belt is nonretractable, the belt is unlatched. (S7.4.6.2)
   - Yes – Pass  
   - No – Fail

8. The buckle and latch plate do not pass through the guides or conduits provided and fall behind the seat when the seat is moved to any position to which it is designed to be adjusted. (S7.4.6.2)
   - Yes – Pass  
   - No – Fail

9. The buckle and latch plate do not pass through the guides or conduits provided and fall behind the seat when the seat back, if foldable, is folded forward as far as possible and then moved backward into position. (S7.4.6.2)
   - Yes – Pass  
   - No – Fail

10. Is the inboard receptacle end of the seat belt assembly, installed in the front outboard designated seating position, accessible with the center armrest in any position to which it can be adjusted (without moving the armrest)? (S7.4.6.2)
    - Yes – Pass  
    - No – Fail  
    - N/A – Rear seat

DATA SHEET 16
AIR BAG SUPPRESSION TELLTALE (S19.2.2)

Test Vehicle: 2009 Kia Borrego
Test Program: FMVSS 208 Compliance
Test Technician: Wayne Dahlke

1. Is the vehicle certified to any suppression performance standards of FMVSS 208?
   X Yes - go to 2
   _No - this form is complete

2. Does telltale emit yellow light when the air bag is suppressed? (S19.2.2(a))
   X Yes - Pass ___ NO - FAIL

3. Are the words “PASSENGER AIR BAG OFF” or “PASS AIR BAG OFF” (S19.2.2(b))
   ___on the telltale? (S19.2.2(b))
   _Yes - Pass, go to 4
   _No - go to 3.2

3.2 Within 25 mm of the telltale? (S19.2.2(b)) 5 mm from the edge of the telltale light?
   X Yes – Pass ___ NO - FAIL

4. Is the telltale separate from the air bag readiness indicator? (S19.2.2(c))
   X Yes - Pass ___ NO - FAIL

5. Is the telltale within the interior of the vehicle? (S19.2.2(d))
   X Yes - Pass ___ NO - FAIL

6. Is the telltale forward of and above the design H-point of both the driver’s and the front
   outboard passenger’s seat when the seats are in their forwardmost seating positions? (S19.2.2(d))
   X Yes - Pass ___ NO - FAIL

7. Is the telltale away from surfaces that can be used for temporary or permanent storage
   of objects that could obscure the telltale from either the driver’s or front outboard
   passenger’s view? (S19.2.2(d))
   X Yes - Pass ___ NO - FAIL

8. Is the telltale located so that it is not obscured from the driver or front outboard
   passenger by a rear-facing child restraint in Appendix A installed in the front outboard
   passenger seat? (S19.2.2(d))
   X Yes - Pass ___ NO - FAIL

9. Is the telltale visible or recognizable during the night? (S19.2.2(e))
   X Yes - Pass ___ NO - FAIL

10. Is the telltale visible or recognizable during the day? (S19.2.2(e))
    X Yes - Pass ___ NO - FAIL

11. If there is a visibility adjustment, do all the adjustment levels make the telltale visible and
    recognizable? (S19.2.2(g))
    X N/A-No visibility adjustment
    _Yes - Pass ___ NO - FAIL

12. Does the telltale remain illuminated while the air bag is suppressed? (S19.2.2(h)) (Leave
    the air bag suppressed for 5 minutes.)
    X Yes - Pass ___ NO - FAIL

13. Is the telltale off while the air bag is activated? (S19.2.2(h)) (Leave the air bag activated
    for 5 minutes.)
    X Yes - Pass ___ NO - FAIL

**IMPACT ANGLE:**
Zero Degrees

**BELTED DUMMIES (YES/NO):**
No

**TEST SPEED:**
- X 32 to 40 kmph
- _ 0 to 48 kmph
- _ 0 to 56 kmph

**DRIVER DUMMY:**
- X 5th female
- _ 50th male

**PASSENGER DUMMY:**
- X 5th female
- _ 50th male

1. Fill the transmission with transmission fluid to the satisfactory range.
2. Drain fuel from vehicle
3. Run the engine until fuel remaining in the fuel delivery system is used and the engine stops.
4. Record the usable fuel tank capacity supplied by the COTR
   Useable Fuel Tank Capacity supplied by COTR: 78.0 liters (20.6 gallons)
5. Record the fuel tank capacity supplied in the owner's manual.
   Useable Fuel Tank Capacity in owner's manual: 78.0 liters (20.6 gallons)
6. Using purple dyed Stoddard solvent having the physical and chemical properties of Type 1 solvent or cleaning fluid, Table 1, ASTM Standard D484-71, "Standard Specifications for Hydrocarbon Dry-cleaning Solvents," or gasoline, fill the fuel tank.
   Amount Added: 78.0 liters (20.6 gallons)
7. Fill the coolant system to capacity.
8. Fill the engine with motor oil to the Max. mark on the dip stick.
9. Fill the brake reservoir with brake fluid to its normal level.
10. Fill the windshield washer reservoir to capacity.
11. Inflate the tires to the tire pressure on the tire placard. If no tire placard is available, inflate the tires to the recommended pressure in the owner’s manual.
   | Tire placard pressure: | RF: 32 psi | LF: 32 psi | RR: 32 psi | LR: 32 psi |
   | Owner’s manual pressure: | RF: 32 psi | LF: 32 psi | RR: 32 psi | LR: 32 psi |
   | Actual inflated pressure: | RF: 32 psi | LF: 32 psi | RR: 32 psi | LR: 32 psi |
12. Record the vehicle weight at each wheel to determine the unloaded vehicle weight (UVW), i.e. "as delivered" weight.
   | Right Front (kg): | 500.8 | Right Rear (kg): | 471.3 |
   | Left Front (kg): | 505.8 | Left Rear (kg): | 489.0 |
   | Total Front (kg): | 1006.6 | Total Rear (kg): | 960.3 |
   | % Total Weight: | 51.2 | % Total Weight: | 48.8 |
   | UVW = TOTAL FRONT PLUS TOTAL REAR (KG): | 1966.9 |
13. UVW Test Vehicle Attitude: (All dimensions in millimeters)
   13.1 Mark a point on the vehicle above the center of each wheel.
   13.2 Place the vehicle on a level surface.
   13.3 Measure perpendicular to the level surface to the 4 points marked on the body and record the measurements
   | RF: 826 | LF: 826 | RR: 839 | LR: 841 |
14. Calculate the Rated Cargo and Luggage Weight (RCLW): 49 kg

14.1 Does the vehicle have the vehicle capacity weight (VCW) on the certification label or tire placard?

X Yes, go to 14.3

□ No, go to 14.2

14.2 VCW = Gross Vehicle Weight - UVW

VCW = __________ - __________ = __________

14.3 VCW = 525 kg (1157 lbs)

14.4 Does the certification or tire placard contain the Designated Seating Capacity (DSC)?

X Yes, go to 14.6

□ No, go to 14.5 and skip 14.6

14.5 DSC = Total number of seat belt assemblies = __________

14.6 DSC = __________

14.7 RCLW = VCW - (68 kg x DSC) = 525 kg - (68 kg x 7) = 49 kg

14.8 Is the vehicle certified as a truck, MPV or bus (see the certification label on the door jamb)?

□ Yes, if the calculated RCLW is greater than 136 kg, use 136 kg as the RCLW. (S8.1.1)

X No, use the RCLW calculated in 14.7

15. Fully Loaded Weight (100% fuel fill): 2113.3 kg

15.1 Place the appropriate test dummy in both front outboard seating positions.

X Driver: 5th female __ 50th male

X Passenger: 5th female __ 50th male

15.2 Load the vehicle with the RCLW from 14.7 or 14.8 whichever is applicable.

15.3 Place the RCLW in the cargo area. Center the load over the longitudinal centerline of the vehicle. (S8.1.1 (d))

15.4 Record the vehicle weight at each wheel to determine the Fully Loaded Weight.

| Right Front (kg): | 523.9 | Right Rear (kg): | 522.5 |
| Left Front (kg): | 527.1 | Left Rear (kg): | 539.8 |
| Total Front (kg): | 1051.0 | Total Rear (kg): | 1062.3 |
| % Total Weight: | 49.7 | % Total Weight: | 50.3 |
| % GVW: | 49.1 | % GVW: | 62.3 |

(% GVW = Axle GVW divided by Vehicle GVW)

Fully Loaded Weight = Total Front Plus Total Rear (kg): 2113.3

16. Fully Loaded Test Vehicle Attitude: (All dimensions in millimeters)

16.1 Place the vehicle on a level surface.

16.2 Measure perpendicular to the level surface to the 4 points marked on the body (see 13.1 above) and record the measurements

RF: 817 LF: 816 RR: 826 LR: 826

17. Drain the fuel system

18. Using purple dyed Stoddard solvent having the physical and chemical properties of Type 1 solvent or cleaning fluid, Table 1, ASTM Standard D484-71, “Standard Specifications for Hydrocarbon Dry-cleaning Solvents,” fill the fuel tank to 92 - 94 percent of useable capacity.

Fuel tank capacity x .94 = 78.0 liters (20.6 gallons) x .94 = 73.3 liters (19.4 gallons)

Amount added: 72.5 liters (19.16 gallons) 93.0%
19. Crank the engine to fill the fuel delivery system with Stoddard solvent

20. Calculate the test weight range.

20.1 Calculated Weight = UVW (see 12 above) + RCLW (see 14 above) + 2x(dummy weight)

\[ 2113.9 \text{ kg} = 1966.9 \text{ kg} + 49.0 \text{ kg} + 98.0 \text{ kg} \]

20.2 Test Weight Range = Calculated Weight (- 4.5 kg, - 9 kg.)

Max. Test Weight = Calculated Test Weight - 4.5 kg = 2109.4 kg
Min. Test Weight = Calculated Test Weight - 9 kg = 2104.9 kg

21. Remove the RCLW from the cargo area.

22. Drain transmission fluid, engine coolant, motor oil, and windshield washer fluid from the test vehicle so that Stoddard solvent leakage from the fuel system will be evident.

23. Vehicle Components Removed For Weight Reduction:
Right rear tail light, second row floor mats, tools, trunk compartment and carpet

24. Secure the equipment and ballast in the load carrying area and distribute it, as nearly as possible, to obtain the proportion of axle weight indicated by the gross axle weight ratings and center it over the longitudinal centerline of the vehicle.

25. If necessary, add ballast to achieve the actual test weight.

N/A

Weight of Ballast: 3.2 kg

26. Ballast, including test equipment, must be contained so that it will not shift during the impact event or interfere with data collection or interfere with high-speed film recordings or affect the structural integrity of the vehicle or do anything else to affect test results. Care must be taken to assure that any attachment hardware added to the vehicle is not in the vicinity of the fuel tank or lines.

27. Record the vehicle weight at each wheel to determine the actual test weight.

</table>
1. **FMVSS 208 vehicle targeting requirements** (See Figures 28A and 28B)

1.1 Targets A1 and A2 are on flat rectangular panels.

1.2 Three circular targets at least 90 mm in diameter and with black and yellow quadrants are mounted at the front on the outboard sides of A1 and A2. The center of each circular target is 100 mm from the one next to it.

   Distance between targets (mm): 100 mm

1.3 Three circular targets at least 90 mm in diameter and with black and yellow quadrants are mounted at the back on the outboard sides of on A1 and A2. The center of each circular target is 100 mm from the one next to it.

   Distance between targets (mm): 100 mm

1.4 The distance between the first circular target at the front of A1 and A2 and the last circular target at the back of A1 and A2 is at least 915 mm.

   Distance between the first and last circular targets (mm): 915 mm

1.5 Firmly fix target A1 on the vehicle roof in the vertical longitudinal plane that is coincident with the midsagittal plane of the driver dummy.

1.6 Firmly fix target A2 on the vehicle roof in the vertical longitudinal plane that is coincident with the midsagittal plane of the passenger dummy.

1.7 Two circular targets (C1 and C2) at least 90 mm in diameter and with black and yellow quadrants are mounted on the outside of the driver door. The centers of each circular target are at least 610 mm apart.

   Distance between targets (mm): 619 mm

1.8 Two circular targets (C1 and C2) at least 90 mm in diameter and with black and yellow quadrants are mounted on the outside of the passenger door. The centers of each circular target are at least 610 mm apart.

   Distance between targets (mm): 616 mm

1.9 Place tape with squares having alternating colors on the top portion of the steering wheel.

1.10 Chalk the bottom portion of the steering wheel.

1.11 Is this an offset test?

   - **Yes, continue with this section**
   - **No, go to 2.**

1.12 Measure the width of the vehicle.

   Vehicle width (mm):

1.13 Find the centerline of the vehicle. (½ of the vehicle width)

1.14 Find the line parallel to the centerline of the vehicle and 0.1 x vehicle width from the centerline of the vehicle.
1.15 Apply 25 mm wide tape with alternating black and yellow squares parallel to and on each side of the line found in 1.14. The edge of each tape shall be 50 mm from the line found in 1.14. The tape shall extend from the bottom of the bumper to the front edge of the windshield. (Figure 28D)

2. Barrier Targeting
2.1 Fix two stationary targets D1 and D2 to the barrier as shown in the Figure 28A. One target is in the vertical longitudinal plane that is coincident with the midsagittal plane of the driver dummy. The other is in the vertical longitudinal plane that is coincident with the midsagittal plane of the passenger dummy.

2.2 Targets D1 and D2 are on a rectangular panel.
2.3 Three circular targets at least 90 mm in diameter and with black and yellow quadrants are mounted on the sides of the rectangular panel away from the longitudinal centerline of the vehicle. The center of each circular target is 100 mm from the one next to it.

Distance between circular targets on D1 (mm): 100 mm
Distance between circular targets on D2 (mm): 100 mm

3. FMVSS 208 Dummy Targeting Requirements
3.1 Place a circular target with black and yellow quadrants on both sides of the driver dummy head as close as possible to the center of gravity of the head in the x and z direction (relative to the measuring directions of the accelerometers).

3.2 Place a circular target with black and yellow quadrants on both sides of the passenger dummy head as close as possible to the center of gravity of the head in the x and z direction (relative to the measuring directions of the accelerometers).

3.3 Place a circular target with black and yellow quadrants on the outboard shoulder of the driver dummy. Place the target as high up on the arm as possible at the intersection of the arm and shoulder. The sleeve of the shirt on the dummy may be cut to make the target visible, but do not remove any material.

3.4 Place a circular target with black and yellow quadrants on the outboard shoulder of the passenger dummy. Place the target as high up on the arm as possible at the intersection of the arm and shoulder. The sleeve of the shirt on the dummy may be cut to make the target visible, but do not remove any material.

4. FMVSS 204 Targeting Requirements
4.1 Is an FMVSS 204 indicant test ordered on the “COTR Vehicle Work Order?”

X Yes, continue with this form.

X No, this form is complete.

4.2 Resection panel (Figure 28C)
4.2.1 The panel deviates no more than 6 mm from perfect flatness when suspended vertically
4.2.2 The 8 targets on the panel are circular targets at least 90 mm in diameter and with black and yellow quadrants.
4.2.3 The center of each of the 4 outer targets are placed within 1 mm of the corners of a square measuring 914 mm on each side.
4.2.4 Locate another square with 228 mm sides and with the center of this square coincident with the center of the 914 mm square.
4.2.5 The center of the 4 inner targets are placed at the midpoints of each of the 228 mm sides.
4.3 Place a circular target at least 90 mm in diameter and with black and yellow quadrants on a material (cardboard, metal, etc.) that can be taped to the top of the steering column.
4.4 Tape the target from 4.3 to the top of the steering column in a manner that does not interfere with the movement of the steering column in a crash.

- \( +Y \) - right of monorail centerline
- \( +Z \) - above ground level
Seating Procedure 5th Percentile Female Driver Dummy (Part 572, Subpart O) (S16.2-S16.3)

1. Seat Position

X_1.1 Position the seat’s adjustable lumbar supports so that the lumbar supports are in the lowest, retracted or deflated adjustment positions. (S16.2.10.1, S20.1.9.1, S20.4.1, S22.1.7.1)
   __ N/A – No lumbar adjustment

X_1.2 Position any adjustable parts of the seat that provide additional support so that they are in the lowest or most open adjustment position. (S16.2.10.2, S20.1.9.2, S20.4.1, S22.1.7.1, S22.4.2.1, S22.4.3.1, S24.4.2.1, S26.2.3, S26.3.1)
   X_ N/A – No additional support adjustment

X_1.3 Position an adjustable leg support system in its rearmost position. (8/27/04 interpretation to Toyota)
   X_ N/A – No adjustable leg support system

X_1.4 Mark a point (seat cushion reference point) on the side of the seat cushion that is between 150 mm and 250 mm from the front edge of the seat cushion. (S16.3.1.12)

X_1.5 Draw a line (seat cushion reference line) through the seat cushion reference point. (S16.3.1.13)

X_1.6 Use only the controls that primarily move the seat in the fore-aft direction to move the seat cushion reference point to the rearmost position. (S16.2.10.3.1, S22.1.7.3)

X_1.7 If the seat cushion adjusts fore-aft, independent of the seat back, use only the controls that primarily move the seat cushion in the fore-aft direction to move the seat cushion reference point to the rearmost position. (S16.2.10.3.1, S20.1.9.3)
   X_ N/A – No independent fore-aft seat cushion adjustment

X_1.8 Use any part of any control, other than the parts just used for fore-aft positioning, to determine the range of angles of the seat cushion reference line and to set the seat cushion reference line at the mid-angle. (S16.2.10.3.1)
   Maximum angle 9.0°
   Minimum angle 5.0°
   Mid-angle 7.0°
X 1.9
If the seat and/or seat cushion height is adjustable, use any part of any control other than the parts which primarily move the seat or seat cushion fore-aft, to put the seat cushion reference point in its lowest position with the seat cushion reference line angle at the mid-angle found in 1.8. (S16.2.10.3.1)

__N/A – No seat height adjustment

X 1.10
Use only the controls that primarily move the seat in the fore-aft direction to verify the seat is in the rearmost position.

X 1.11
Use only the controls that primarily move the seat in the fore-aft direction to mark the fore-aft seat positions. Mark each position so that there is a visual indication when the seat is at a particular position. For manual seats, move the seat forward one detent at a time and mark each detent. For power seats, mark only the rearmost, middle, and foremost positions. Label three of the positions with the following: F for foremost, M for mid-position (if there is no mid-position, label the closest adjustment position to the rear of the mid-point), and R for rearmost.

X 1.12
Use only the controls that primarily move the seat in the fore-aft direction to place the seat in the rearmost position.

X 1.13
Use any part of any control, other than the parts which primarily move the seat or seat cushion fore-aft, to find and visually mark the maximum, minimum, and middle height of the seat cushion reference point with the seat cushion reference line at the mid-angle determined in 1.8. (S20.1.9.4, S22.1.2, S22.1.7.4, S22.3.1, S22.4.3.1, S24.1.2, S24.3.1, S24.4.3.1, S26.2.3, S26.3.1)

__N/A – No seat height adjustment. Go to 1.18

X 1.14
Use only the controls that primarily move the seat and/or seat cushion in the fore-aft direction to place the seat in the mid-fore-aft position.

X 1.15
Use any part of any control, other than the parts which primarily move the seat or seat cushion fore-aft, to find and visually mark the maximum, minimum, and middle height of the seat cushion reference point with the seat cushion reference line at the mid-angle determined in 1.8. (S20.1.9.4, S22.1.2, S22.1.7.4, S22.3.1, S24.1.2, S24.3.1)

X 1.16
Use only the control that change the seat in the fore-aft direction to place the seat in the foremost position. (S16.2.10.3.2)

X 1.17
Use any part of any control, other than the parts which primarily move the seat or seat cushion fore-aft, to find and visually mark the maximum, minimum, and middle height of the seat cushion reference point with the seat cushion reference line at the mid-angle determined in 1.8. (S16.2.10.3.3, S20.1.9.4, S22.1.2, S22.1.7.4, S22.3.1, S24.1.2, S24.3.1)

X 1.18
Is the seat a bucket seat?

X Yes, go to 1.19 and skip 1.20

__No, go to 1.20 and skip 1.19

X 1.19
Bucket seats:
Locate and mark for future reference the longitudinal centerline of the seat cushion. The intersection of the vertical longitudinal plane that passes through the SgRP and the seat cushion upper surface determines the longitudinal centerline of a bucket seat cushion. (S16.3.1.10 & S20.1.10)
1.20 Bench seats (complete ONLY the one that is applicable to the seat being marked):

Locate and mark for future reference the longitudinal line on the seat cushion that marks the intersection of the vertical longitudinal plane through the centerline of the steering wheel and the seat cushion upper surface.

2. Head Restraint Position

N/A Vehicle contains automatic head restraints.

N/A, there is no head restraint adjustment Go to 3

X 2.1 Adjust the head restraint to its lowest position. (S16.2.10.2, S20.1.9.6 S20.4.1, S22.1.7.6, S22.4.2.1, S22.4.3.1, S24.4.3.1, S26.2.3, S26.3.1)

X 2.2 All adjustments of the head restraint shall be used to position it full forward. For example, if it rotates, rotate it such that the head restraint extends as far forward as possible. Mark the foremost position. (S16.2.10.2 & S16.3.4.4 & S20.1.9.6, S20.4.1, S22.4.2.1, S22.4.3.1, S24.4.3.1, S26.2.3, S26.3.1)

X 2.3 Measure the vertical distance from the top most point of the head restraint to the bottom most point. Locate and mark a horizontal plane through the midpoint of this distance. (S16.3.4.3)

Vertical height of head restraint _240_ mm
Mid-point height _120_ mm

X 3. Is the steering wheel adjustable up and down and/or in and out?

X Yes – go to 3.1

No – Go to 4

X 3.1. Find and mark for future reference each up and down position. Label three of the positions with the following: H for highest, M for mid-position (if there is no mid-position, label the next lowest adjustment position), and L for lowest.

N/A – steering wheel is not adjustable up and down

X 3.2. Find and mark for future references each in and out position. Label three of the positions with the following: F for foremost, M for mid-position (if there is no mid-position, label the next rearmost adjustment position), and R for rearmost.

X N/A – steering wheel is not adjustable in and out.

X 3.3. Use the markings to position the steering controls in the mid-position or if applicable next lowest detent position. (S16.2.9)

X 4. Place the SCRP in the full rearward, mid-height position, and mid-seat cushion angle, determined in Item 1. (S16.3.2.1.1)

X 5. If the vehicle has an adjustable accelerator pedal, place it in the full forward position. (S16.3.2.2.1)

N/A accelerator pedal not adjustable

X 6. Fully recline the seat back. (S16.3.2.1.2)

N/A seat back not adjustable.

X 7. Place the dummy in the seat with the legs at an angle of 120 degrees to the thighs. The calves should not be touching the seat cushion. (S16.3.2.1.2)

X 8. Position the dummy in the seat such that the midsagittal plane is coincident with the longitudinal seat cushion markings as determined in Item 1.19 or 1.20. (S16.3.2.1.3 and S16.3.2.1.4)
9. Hold down the dummy’s thighs and push rearward on the upper torso to maximize the pelvic angle. (S16.3.2.1.5)

10. Set the angle between the legs and the thighs to 120 degrees. (S16.3.2.1.6)

11. Set the transverse distance between the centers of the front of the knees at 160 to 170 mm. (6.3 to 6.7 inches) Center the knee separation with respect to the longitudinal seat cushion marking as determined in Item 1.19 or 1.20. (S16.3.2.1.6)
   Record Knee Separation _170 mm_

12. Push rearward on the dummy’s knees until the pelvis contacts the seat back, or the backs of the calves contact the seat cushion, whichever occurs first. (S16.3.2.1.6)
   ___Pelvis contacted seat back.
   ___Calves contacted seat cushion.

13. Gently rock the upper torso ± 5 degrees (approximately 51 mm (2 inches)) side-to-side three time. (S16.3.2.1.7)

14. If needed, extend the legs until the feet do not contact the floor pan. The thighs should be resting on the seat cushion. (S16.3.2.1.8)

15. Position the right foot until the foot is in line with a longitudinal vertical plane passing through the center of the accelerator pedal. Maintain the leg and thigh in a vertical plane. (S16.3.2.1.8)

16. Rotate the left leg and thigh laterally to equalize the distance between each knee and the longitudinal seat cushion marking as determined in Item 1.19 or 1.20. (S16.3.2.1.8)

17. Attempt to return the seat to the foremost fore-aft position, mid-height, and seat cushion mid-angle as determined in Item 1. The foot may contact and depress the accelerator and/or change the angle of the foot with respect to the leg. (S16.3.2.1.8)
   ___Foremost position achieved. Proceed to step 22.
   ___Foremost not achieved because of foot interference. Proceed to step 19.
   ___Foremost not achieved because of steering wheel contact.

18. If either of the dummy’s legs contact the steering wheel, move the steering wheel up the minimum amount required to avoid contact. If the steering wheel is not adjustable separate the knees the minimum required to avoid contact. (S16.3.2.1.8)
   ___N/A- there was no leg contact
   ___Steering wheel repositioned
   ___Knees separated

19. If the left foot interferes with the clutch or brake pedals, rotate the left foot about the leg to provide clearance. If this is not sufficient, rotate the thigh outboard at the hip the minimum amount required for clearance. (S16.3.2.1.8)
   ___N/A, No foot interference with pedals.
   ___Foot adjusted to provide clearance.
   ___Foot and Thigh adjusted to provide clearance.
20. Continue to move the seat. Use seat controls to line up the seat markings determined during item 1 to set the foremost fore-aft position, mid-height position and the seat cushion mid-angle. If the dummy contacts the interior move the seat rearward until a maximum clearance of 5 mm (0.2 inches) is achieved or the seat is in the closest detent position that does not cause dummy contact. (S16.3.2.1.8)

Foremost, mid-height position and the seat cushion mid-angle reached

Dummy contact. Clearance set at maximum of 5mm

Measured Clearance ________________

Dummy Contact. Seat set at nearest detent position.

Seat position ___ detent positions rearward of foremost
(foremost is position zero)

21. If the steering wheel was repositioned in step 18, return the steering wheel to the original position. If the steering wheel contacts the dummy before reaching the original position, position the wheel until a maximum clearance of 5mm (.2 inches) is achieved, or the steering wheel is in the closest detent position that does not cause dummy contact. (S16.3.2.1.8)

N/A Steering wheel was not repositioned.

Original position achieved.

Dummy contact. Clearance set at maximum of 5mm

Measured Clearance ________________

Dummy Contact. Steering wheel set at nearest detent position.

Steering wheel position ___ detent positions upward of original position.
(Original position is position zero)

22. If the seat back is adjustable, rotate the seat back forward while holding the thighs in place. Continue rotating the seat back forward until the transverse instrument platform of the dummy head is level ± 0.5 degrees. If the head cannot be leveled using the seat back adjustment, or the seat back is not adjustable, use the lower neck bracket adjustment to level the head. If a level position cannot be achieved, minimize the angle. (S16.3.2.1.9)

Head Level Achieved. (Check all that apply)

X Head leveled using the adjustable seat back

X Head leveled using the neck bracket.

Head Angle __________ degrees

Head Level NOT Achieved. (Check all that apply)

X Head adjusted using the adjustable seat back

X Head adjusted using the neck bracket.

Head Angle ___________ degrees

23. Verify the pelvis is not interfering with the seat bight. (S16.3.2.1.9)

X No interference

X Pelvis moved forward the minimum amount so that it is not caught in the seat bight.

24. Verify the dummy abdomen is properly installed. (S16.3.2.1.9)

X Abdomen still seated properly into dummy

X Abdomen was adjusted because it was not seated properly into dummy
X_25. Head Angle
   X N/A, neither the pelvis nor the abdomen were adjusted.

X_25.1 Head still level (Go to 26)

---

25.2 Head level adjusted
   ___Head Level Achieved. (Check all that apply)
   ___Head leveled using the adjustable seat back
   ___Head leveled using the neck bracket.
   Head Angle ____________ degrees
   ___Head Level NOT Achieved. (Check all that apply)
   ___Head level adjusted using the adjustable seat back
   ___Head level adjusted using the neck bracket.
   Head Angle ____________ degrees

X_26. If the dummy torso contacts the steering wheel while performing step 22, reposition the
steering wheel in the following order to eliminate contact. (S16.3.2.1.9)
X N/A, No dummy torso contact with the steering wheel.

---

26.1 Adjust telescoping mechanism.
   ___N/A No telescoping adjustment.
   ___Adjustment performed (fill in appropriate change)
   Steering wheel moved ____ detent positions in the forward direction.
   Steering wheel moved ____ mm in the forward direction.

26.2 Adjust tilt mechanism.
   ___N/A No tilt adjustment.
   ___No adjustment performed.
   ___Adjustment performed. (circle one)
   Steering wheel moved ____ detent positions Upward/Downward.
   Steering wheel moved ____ degrees Upward/Downward

26.3 Adjust Seat in the aft direction.
   ___No Adjustment performed.
   ___Seat moved aft ____ mm from original position.
   ___Seat moved aft ____ detent positions from the original position.

X_27. Measure and set the pelvic angle using the pelvic angle gage TE-2504. The pelvic
angle should be 20.0 degrees ± 2.5 degrees. If the pelvic angle cannot be set to the
specified range because the head will not be level or because the dummy will have need
major repositioning, adjust the pelvis as closely as possible to the angle range, but keep
the head level. (S16.3.2.1.11)
X Pelvic angle set to 20.0 degrees ± 2.5 degrees.
   ___Pelvic angle of 20.0 degrees not achieved, the angular difference was minimized.
X Record the pelvic angle. ___ 21.6 ____ degrees

X_28. Check the dummy for contact with the interior after completing adjustments.
(S16.3.2.1.12)
X No contact.
   ___ Dummy in contact with interior.
   ___Seat moved aft ____ mm from the previous position.
   ___Seat moved aft ____ detent positions from the previous position.
X 29. Check the dummy to see if additional interior clearance is obtained, allowing the seat to be moved forward. (S16.3.2.1.12)
   X N/A, Seat already at foremost position.
   X Clearance unchanged. No adjustments required.
   _Additional clearance available
   _Seat moved Forward ___ mm from the previous position.
   _Seat moved Forward ___ detent positions from the previous position.

X 30. Driver’s foot positioning, right foot. Place the foot perpendicular to the leg and determine if the heel contacts the floor pan at any leg position. If the heel contacts the floor pan proceed to step 31 otherwise, proceed to step 32. (S16.3.2.2.1)

X 31. Perform the following steps until either all steps are completed, or the foot contacts the accelerator pedal. Step 31.6 shall be completed in all cases. (S16.3.2.2.1(a))

X 31.1 With the rear of the heel contacting the floor pan, move the foot forward until pedal contact occurs or the foot is at the full forward position.

_31.2 If the vehicle has an adjustable accelerator pedal, move the pedals rearward until pedal contact occurs or the pedals reach the full rearward position.

_31.3 Extend the leg, allowing the heel to lose contact with the floor until the foot contacts the pedal. Do not raise the toe of the foot higher than the top of the accelerator pedal. If the foot does not contact the pedal, proceed to the next step. If pedal contact does occur, place a tapered foam block as shown in Figure G1 under the heel with the shallow part of the taper facing forward. (S16.3.2.2.3)

_31.4 Angle the foot to achieve contact between the foot and the pedal. If the foot does not contact the pedal, return the foot to the perpendicular orientation. If pedal contact does occur, place a tapered foam block as shown in Figure G1 under the heel with the shallow part of the taper facing forward. (S16.3.2.2.3)

_31.5 Align the centerline of the foot with the vertical-longitudinal plane passing through the center of the accelerator pedal. Place a tapered foam block as shown in Figure G1 under the heel with the shallow part of the taper facing forward. (S16.3.2.2.3)

X 31.6 Record foot position
   _Pedal Contact achieved. Contact occurred at step _31.1_.
   _Heel contacts floor pan
   _Heel set ______ mm from floor pan.
   _Pedal Contact not achieved. Heel set ______ mm from the floor pan.
32. Perform the following steps until either all steps are completed, or the foot contacts the accelerator pedal. Step 30.5 shall be completed in all cases.

32.1 Extend the leg until the foot contacts the pedal. Do not raise the toe of the foot higher than the top of the accelerator pedal. If the foot does not contact the pedal, proceed to the next step. If pedal contact does occur, place a tapered foam block as shown in Figure G1 under the heel with the shallow part of the taper facing forward. (S16.3.2.2.1(b) & S16.3.2.2.3)

32.2 If the vehicle has an adjustable accelerator pedal, move the pedals rearward until pedal contact occurs or the pedals reach the full rearward position. If pedal contact does occur, place a tapered foam block as shown in Figure G1 under the heel with the shallow part of the taper facing forward. (S16.3.2.2.1(b) & S16.3.2.2.3)

32.3 Angle the foot to achieve contact between the foot and the pedal. If the foot does not contact the pedal, return the foot to the perpendicular orientation. If pedal contact does occur, place a tapered foam block as shown in Figure G1 under the heel with the shallow part of the taper facing forward. (S16.3.2.2.2 & S16.3.2.2.3)

32.4 Align the centerline of the foot in the same horizontal plane as the centerline of the accelerator pedal. Place a tapered foam block as shown in Figure G1 under the heel with the shallow part of the taper facing forward. (S16.3.2.2 & S16.3.2.2.3)

32.5 Record foot position
  __Pedal Contact achieved. Contact occurred at step ________.
  __Heel set _____ mm from floor pan.
  __Pedal Contact not achieved. Heel set _____ mm from the floor pan.
X_33. Driver’s foot positioning, left foot.

X_33.1 Place the foot perpendicular to the leg and determine if the heel contacts the floor pan at any leg position. If the heel contacts the floor pan proceed to step 33.2, otherwise position the leg as perpendicular to the thigh as possible with the foot parallel to the floor pan. (S16.2.2.6)

X_33.2 Place the foot on the toe board with the heel resting on the floor pan as close to the intersection of the floor pan and the toe board as possible. Adjust the angle of the foot if necessary to contact the toe board. If the foot will not contact the toe board, set the foot perpendicular to the leg, and set the heel on the floor pan as far forward as possible. Avoid contact with the brake pedal, clutch pedal, wheel well projection, and footrest. To avoid this contact use the following three manipulations in the order listed, with each subsequent option incorporating the previous, until contact is avoided: rotate the foot about the lower leg (abduction/adduction), plantar flex the foot, rotate the leg outboard about the hip. Movement should be the minimum amount necessary. If it is not possible to avoid all foot contact, give priority to avoiding brake or clutch pedal contact. (S16.2.2.4 & S16.2.2.5 & S16.2.2.7) 

X No contact
__Foot rotated about the leg (abduction/adduction)
__Foot rotated about the leg, and foot plantar flexed
__Foot rotated about the leg, foot plantar flexed, and the leg rotated about the hip.

X_33.3 Record foot position.
__Heel does not contact floor pan.
__Heel on floor pan and foot on toe board.
X Heel on floor pan and foot not on toe board.

X_34. Driver arm/hand positioning.

X_34.1 Place the dummy’s upper arms adjacent to the torso with the arm centerlines as close to a vertical longitudinal plane as possible. (S16.3.2.3.1)

X_34.2 Place the palms of the dummy in contact with the outer part of the steering wheel rim at its horizontal centerline with the thumbs over the steering wheel rim. (S16.3.2.3.2)

X_34.3 If it is not possible to position the thumbs inside the steering wheel rim at its horizontal centerline, then position them above and as close to the horizontal centerline of the steering wheel rim as possible. (S16.3.2.3.3)

X_34.4 Lightly tape the hands to the steering wheel rim so that if the hand of the test dummy is pushed upward by a force of not less than 9 N (2 lb) and not more than 22 N (5 lb), the tape releases the hand from the steering wheel rim. S16.3.2.3.4

X_35. Adjustable head restraints
__N/A, there is no head restraint adjustment

__35.1 If the head restraint has an automatic adjustment, leave it where the system positions the restraint after the dummy is placed in the seat. (S16.3.4.1) Go to 36.

__35.2 Adjust each head restraint vertically so that the mid-horizontal plane determined in Item 2 is aligned with the center of gravity (CG) of the dummy head. (S16.3.4.3)
X 35.3 If the above position is not attainable, move the vertical center of the head restraint to the closest detent below the center of the head CG. (S16.3.4.3)
   __N/A midpoint position attained in previous step
   X_ Headrest set at nearest detent below the head CG

X 35.4 If the head restraint has a fore and aft adjustment, place the restraint in the foremost position or until contact with the head is made, whichever occurs first. (S16.3.4.4)

X 36. Driver and passenger manual belt adjustment (for tests conducted with a belted dummy). (S16.3.5)
   X_ N/A Dummies are unbelted for this test.

   __36.1 If an adjustable seat belt D-ring anchorage exists, place it in the manufacturer's design position for a 5th percentile adult female. (S16.3.5.1) This information will be supplied by the COTR.
   Manufacturer's specified position
   Actual Position

   __36.2 Place the Type 2 manual belt around the test dummy and fasten the latch. (S16.3.5.2)

   __36.3 Ensure that the dummy's head remains as level as possible. (S16.3.5.3)

   __36.4 Remove all slack from the lap belt. Pull the upper torso webbing out of the retractor and allow it to retract; repeat this operation four times. Apply a 9 N (2 lbf) to 18 N (4 lbf) tension load to the lap belt. If the belt system is equipped with a tension-relieving device, introduce the maximum amount of slack into the upper torso belt that is recommended by the manufacturer. If the belt system is not equipped with a tension-relieving device, allow the excess webbing in the shoulder belt to be retracted by the retractive force of the retractor. (S16.3.5.4)

I certify that I have read and performed each instruction.

(Check this item ONLY if it applies to this vehicle.)

__The passenger seat adjustments are controlled by the adjustments made to the driver’s seat. Therefore, positioning of the passenger dummy is made simultaneously with the driver dummy. Adjustments made to the seat to position the driver will over ride any adjustments that would normally be made to position the passenger. (S16.2.10.3)

1. Seat Position

X 1.1 Position the seat’s adjustable lumbar supports so that the lumbar supports are in the lowest, retracted or deflated adjustment positions. (S16.2.10.1, S20.1.9.1, S20.4.1, S22.1.7.1)
   X N/A – No lumbar adjustment

X 1.2 Position any adjustable parts of the seat that provide additional support so that they are in the lowest or most open adjustment position. (S16.2.10.2, S20.1.9.2, S20.4.1, S22.1.7.1, S22.4.2.1, S22.4.3.1, S24.4.2.1, S26.2.3, S26.3.1)
   X N/A – No additional support adjustment

X 1.3 Position an adjustable leg support system in its rearmost position. (8/27/04 interpretation to Toyota)
   X N/A – No adjustable leg support system

X 1.4 **Mark a** point (seat cushion reference point) on the side of the seat cushion that is between 150 mm and 250 mm from the front edge of the seat cushion. (S16.3.1.12)

X 1.5 Draw a line (seat cushion reference line) through the seat cushion reference point. (S16.3.1.13)

X 1.6 Use only the controls that primarily move the seat in the fore-aft direction to move the seat cushion reference point to the rearmost position. (S16.2.10.3.1, S22.1.7.3)

X 1.7 If the seat cushion adjusts fore-aft, independent of the seat back, use only the controls that primarily move the seat cushion in the fore-aft direction to move the seat cushion reference point to the rearmost position. (S16.2.10.3.1, S20.1.9.3)
   X N/A – No independent fore-aft seat cushion adjustment
X_1.8 Use any part of any control, other than the parts just used for fore-aft positioning, to determine the range of angles of the seat cushion reference line and to set the seat cushion reference line at the mid-angle. (S16.2.10.3.1)
  Maximum angle Zero
  Minimum angle Zero
  Mid-angle Zero

X_1.9 If the seat and/or seat cushion height is adjustable, use any part of any control other than the parts which primarily move the seat or seat cushion fore-aft, to put the seat cushion reference point in its lowest position with the seat cushion reference line angle at the mid-angle found in 1.8. (S16.2.10.3.1)
X_N/A – No seat height adjustment

X_1.10 Use only the controls that primarily move the seat in the fore-aft direction to verify the seat is in the rearmost position.

X_1.11 Use only the controls that primarily move the seat in the fore-aft direction to mark the fore-aft seat positions. Mark each position so that there is a visual indication when the seat is at a particular position. For manual seats, move the seat forward one detent at a time and mark each detent. For power seats, mark only the rearmost, middle, and foremost positions. Label three of the positions with the following: F for foremost, M for mid-position (if there is no mid-position, label the closest adjustment position to the rear of the mid-point), and R for rearmost.

X_1.12 Use only the controls that primarily move the seat in the fore-aft direction to place the seat in the rearmost position.

X_1.13 Use any part of any control, other than the parts which primarily move the seat or seat cushion fore-aft, to find and visually mark the maximum, minimum, and middle height of the seat cushion reference point with the seat cushion reference line at the mid-angle determined in 1.8. (S20.1.9.4, S22.1.2, S22.1.7.4, S22.3.1, S22.4.3.1, S24.1.2, S24.3.1, S24.4.3.1, S26.2.3, S26.3.1)
X_N/A – No seat height adjustment. Go to 1.18

__1.14 Use only the controls that primarily move the seat and/or seat cushion in the fore-aft direction to place the seat in the mid-fore-aft position.

__1.15 Use any part of any control, other than the parts which primarily move the seat or seat cushion fore-aft, to find and visually mark the maximum, minimum, and middle height of the seat cushion reference point with the seat cushion reference line at the mid-angle determined in 1.8. (S20.1.9.4, S22.1.2, S22.1.7.4, S22.3.1, S24.1.2, S24.3.1)

__1.16 Use only the controls that change the seat in the fore-aft direction to place the seat in the foremost position. (S16.2.10.3.2)

__1.17 Use any part of any control, other than the parts which primarily move the seat or seat cushion fore-aft, to find and visually mark the maximum, minimum, and middle height of the seat cushion reference point with the seat cushion reference line at the mid-angle determined in 1.8. (S16.2.10.3.3, S20.1.9.4, S22.1.2, S22.1.7.4, S22.3.1, S24.1.2, S24.3.1)

X_1.18. Is the seat a bucket seat?
  X_ Yes, go to 1.19 and skip 1.20
  __No, go to 1.20 and skip 1.19
1.19 Bucket seats:
Locate and mark for future reference the longitudinal centerline of the seat cushion. The intersection of the vertical longitudinal plane that passes through the SgRP and the seat cushion upper surface determines the longitudinal centerline of a bucket seat cushion. (S16.3.1.10 & S20.1.10)

1.20 Bench seats:
Locate and mark the longitudinal centerline of the passenger seat cushion. The longitudinal centerline is the same distance from the longitudinal centerline of the vehicle as the center of the steering wheel. (S20.2.1.4, S22.2.1.3, S24.2.3, S20.4.4, S22.2.2.1(b), S22.2.2.3(b), S22.2.2.4(a), S22.2.2.5(a), S22.2.2.6(a), S22.2.2.7(a), S24.2.3(a))
Record the distance from the longitudinal centerline of the vehicle to the center of the steering wheel. _______ Record the distance from the longitudinal centerline of the vehicle to the longitudinal centerline of the seat cushion. (The vertical plane through this longitudinal centerline is Plane B for suppression.) _______

2. Head Restraint Position
__N/A Vehicle contains automatic head restraints.
__N/A, there is no head restraint adjustment Go to 3

2.1 Adjust the head restraint to its lowest position. (S16.2.10.2, S20.1.9.6 S20.4.1, S22.1.7.6, S22.4.2.1, S22.4.3.1, S24.4.3.1, S26.2.3, S26.3.1)

2.2 All adjustments of the head restraint shall be used to position it full forward. For example, if it rotates, rotate it such that the head restraint extends as far forward as possible. Mark the foremost position. (S16.2.10.2 & S16.3.4.4 & S20.1.9.6, S20.4.1, S22.4.2.1, S22.4.3.1, S24.4.3.1, S26.2.3, S26.3.1)

2.3 Measure the vertical distance from the top most point of the head restraint to the bottom most point. Locate and mark a horizontal plane through the midpoint of this distance. (S16.3.4.3)
  Vertical height of head restraint _240_ mm
  Mid-point height _120_ mm

3. Place the SCRP in the full rearward, mid-height position, and mid-seat cushion angle. (S16.3.3.1.1)

4. Fully recline the seat back. (S16.3.3.1.2)
  __ N/A seat back not adjustable.

5. Place the dummy in the seat with the legs at an angle of 120 degrees to the thighs. The calves should not be touching the seat cushion. (S16.3.3.1.2)

6. Position the dummy in the seat such that the midsagittal plane is coincident with the longitudinal seat cushion marking that was determined in item 1.19 or 1.20. (S16.3.3.1.3 and S16.3.3.1.4)

7. Hold down the dummy’s thighs and push rearward on the upper torso to maximize the pelvic angle. (S16.3.3.1.5)

8. Set the angle between the legs and the thighs to 120 degrees. (S16.3.3.1.6)
9. Set the transverse distance between the centers of the front of the knees at 160 to 170 mm. (6.3 to 6.7 inches). Center the knee separation with respect to the longitudinal seat cushion marking that was determined in item 1.19 or 1.20. (S16.3.3.1.6)

   Record Knee Separation: __165________

10. Push rearward on the dummy’s knees until the pelvis contacts the seat back, or the backs of the calves contact the seat cushion, whichever occurs first. (S16.3.3.1.6)

   _Pelvis contacted seat back.

   _Calves contacted seat cushion.

11. Gently rock the upper torso ± 5 degrees (approximately 51 mm (2 inches)) side-to-side three times. (S16.3.3.1.7)

12. If needed, extend the legs until the feet do not contact the floor pan. The thighs should be resting on the seat cushion. (S16.3.3.1.8)

13. Use seat controls to line up the seat markings determined during the completion of item 1 to set the foremost fore-aft position, mid-height position and the seat cushion mid-angle. If the dummy contacts the interior move the seat rearward until a maximum clearance of 5 mm (0.2 inches) is achieved or the seat is in the closest detent position that does not cause dummy contact. (S16.3.3.1.8)

   _Foremost, mid-height position and the seat cushion mid-angle reached

   _Dummy contact. Clearance set at maximum of 5mm

   Measured Clearance____________

   _Dummy Contact. Seat set at nearest detent position.

   Seat position ____ detent positions rearward of foremost

   (foremost is position zero)

14. If the seat back is adjustable, rotate the seat back forward while holding the thighs in place. Continue rotating the seat back forward until the transverse instrument platform of the dummy head is level ± 0.5 degrees. If head cannot be leveled using the seat back adjustment, or the seat back is not adjustable, use the lower neck bracket adjustment to level the head. If a level position cannot be achieved, adjust the head as closely as possible to the ± 0.5 degree range. (S16.3.3.1.9 and S16.3.3.1.10)

   (Check All That Apply)

   _Seat back not adjustable

   _Seat back not independent of driver side seat back

   _Head Level Achieved. (Check all that apply)

   _Head leveled using the adjustable seat back

   _Head leveled using the neck bracket.

   Head Angle ___0.3______ degrees

   _Head Level NOT Achieved. (Check all that apply)

   _Head adjusted using the adjustable seat back

   _Head adjusted using the neck bracket.

   Head Angle _______________ degrees

15. Verify the pelvis is not interfering with the seat bight. (S16.3.3.1.9)

   _No interference

   _Pelvis moved forward the minimum amount so that it is not caught in the seat bight.

16. Verify the dummy abdomen is properly installed. (S16.3.3.1.9)

   _Abdomen still seated properly into dummy

   _Abdomen was adjusted because it was not seated properly into dummy

17. Head Angle

   _N/A, neither the pelvis nor the abdomen were adjusted.
X_17.1 Head still level (Go to 18)

X_17.2 Head level adjusted

____Head Level Achieved. (Check all that apply)
__Head leveled using the adjustable seat back
__Head leveled using the neck bracket.

__Head Angle ____________ degrees

____Head Level NOT Achieved. (Check all that apply)
__Head adjusted using the adjustable seat back
__Head adjusted using the neck bracket.

__Head Angle ____________ degrees

X_18. Measure and set the pelvic angle using the pelvic angle gage TE-2504. The pelvic angle should be 20.0 degrees ± 2.5 degrees. If the pelvic angle cannot be set to the specified range because the head will not be level or because the dummy will have need major repositioning, adjust the pelvis as closely as possible to the angle range, but keep the head level.

X Pelvic angle set to 20.0 degrees ± 2.5 degrees.

__Pelvic angle of 20.0 degrees not achieved, the angular difference was minimized.

X Record the pelvic angle. __ 21.1 ______ degrees

X_19. Check the dummy for contact with the interior after completing adjustments.

X No contact.

__Dummy in contact with interior.

__Seat moved aft ___ mm from the previous position.
__Seat moved aft ___ detent positions from the previous position.

X_20. Verify the transverse instrument platform of the dummy head is level +/- 0.5 degrees. Use the lower neck bracket adjustment to level the head. If a level position cannot be achieved, minimize the angle. (S16.3.3.1.9, S16.3.3.1.10, and S16.3.3.1.11)

X Head Level Achieved

__Head Angle ____________ degrees

__Head Level NOT Achieved.

__Head Angle ____________ degrees

X_21. Check the dummy to see if additional interior clearance is obtained, allowing the seat to be moved forward. (S16.3.3.1.12)

X N/A Bench Seat

X N/A Seat already at full forward position.

__Clearance unchanged. No adjustments required.

__Additional clearance available

__Seat moved Forward ___ mm from the previous position.
__Seat moved Forward ___ detent positions from the previous position.
__Seat moved Forward, Full Forward position reached.

X_22. Passenger foot positioning. (Indicate final position achieved) (S16.3.3.2)

__22.1 Place feet flat on the toe board; OR (S16.3.3.2.1)

X 22.2 If the feet cannot be placed flat on the toe board, set the feet perpendicular to the lower leg, and rest the heel as far forward on the floor pan as possible; OR (S16.3.3.2.2)

__22.3 If the heels do not touch the floor pan, set the legs as perpendicular to the thighs as possible and set the feet parallel to the floor pan. (S16.3.3.2.2)

X_23. Passenger arm/hand positioning. (S16.3.3.3)
X_23.1 Place the dummy’s upper arms adjacent to the torso with the arm centerlines as close to a vertical longitudinal plane as possible. (S16.3.3.3.1)

X_23.2 Place the palms of the dummy in contact with the outer part of the thighs. (S16.3.3.3.2)

X_23.3 Place the little fingers in contact with the seat cushion. (S16.3.3.3.3)

X_24. Adjustable head restraints (S16.3.4)
__N/A, there is no head restraint adjustment

__24.1 If the head restraint has an automatic adjustment, leave it where the system positions the restraint after the dummy is placed in the seat. (S16.3.4.1) Go to 25.

__24.2 Adjust each head restraint vertically so that the horizontal plane determined in Item 2 is aligned with the center of gravity (CG) of the dummy head. (S16.3.4.3)

X_24.3 If the above position is not attainable, move the vertical center of the head restraint to the closest detent below the center of the head CG. (S16.3.4.3)
__N/A midpoint position attained in previous step
  X_ Headrest set at nearest detent below the head CG

__24.4 If the head restraint has a fore and aft adjustment, place the restraint in the foremost position or until contact with the head is made, whichever occurs first. (S16.3.4.4)

X_25. Manual belt adjustment (for tests conducted with a belted dummy) S16.3.5
__N/A, Unbelted test

__25.1 If an adjustable seat belt D-ring anchorage exists, place it in the manufacturer’s design position for a 5th percentile adult female. This information will be supplied by the COTR. (S16.3.5.1)
  Manufacturer’s specified position __________________________________________
  Actual Position ______________________________________

__25.2 Place the Type 2 manual belt around the test dummy and fasten the latch. (S16.3.5.2)

__25.3 Ensure that the dummy’s head remains as level as possible. (S16.3.5.3)

__25.4 Remove all slack from the lap belt. Pull the upper torso webbing out of the retractor and allow it to retract; repeat this operation four times. Apply a 9 N (2 lbf) to 18 N (4 lbf) tension load to the lap belt. If the belt system is equipped with a tension-relieving device, introduce the maximum amount of slack into the upper torso belt that is recommended by the manufacturer. If the belt system is not equipped with a tension-relieving device, allow the excess webbing in the shoulder belt to be retracted by the retractive force of the retractor. (S16.3.5.4)

I certify that I have read and performed each instruction.

DATA SHEET 38
CRASH TEST

Test Vehicle: 2009 Kia Borrego
Test Program: FMVSS 208 Compliance
Test Technician: Jordan Haynes
NHTSA No.: C90509
Test Date: 4/22/09

IMPACT ANGLE: Zero Degrees
BELTED DUMMIES (YES/NO): No
TEST SPEED: X 32 to 40 kmph, 0 to 48 kmph, 0 to 56 kmph
DRIVER DUMMY: X 5th female, 50th male
PASSENGER DUMMY: X 5th female, 50th male

1. Vehicle underbody painted.
2. The speed measuring devices are in place and functioning.
3. The speed measuring devices are 1.0 m from the barrier (spec. 1.5m) and 30 cm from the barrier (spec. is 30 cm).
4. Convertible top is in the closed position.
5. Instrumentation and wires are placed so motion of dummies during impact is not affected.
6. Tires inflated to pressure on tire placard or if it does not have a tire placard because it is not a passenger car, then inflated to the tire pressure specified in the owner information.
    - Front left tire: 220 kPa
    - Front right tire: 220 kPa
    - Rear left tire: 220 kPa
    - Rear right tire: 220 kPa

7. Time zero contacts on barrier in place.
8. Pre test zero and shunt calibration adjustments performed and recorded.
9. Dummy temperature meets requirements of section 12.2 of the test procedure.
10. Vehicle hood closed and latched.
11. Transmission placed in neutral.
12. Parking brake off.
13. Are the heads still level?
    - Yes, go to 14
    - No, Adjust dummy so that head is at the angle recorded in the Appendix F or G data sheets and then continue.
15. Doors closed and latched but not locked.
16. Posttest zero and shunt calibration checks performed and recorded.
17. Actual test speed 39.9 kmph.
18. Vehicle rebound from the barrier 182 cm.
19. Describe whether the doors open after the test and what method is used to open the doors.
    - Left Front Door: Door remained closed and latched; Door opened without tools.
    - Right Front Door: Door remained closed and latched; Door opened without tools.
    - Left Rear Door: Door remained closed and latched; Door opened without tools.
    - Right Rear Door: Door remained closed and latched; Door opened without tools.
20. Describe the contact points of the dummy with the interior of the vehicle.
    - Driver Dummy: Head to Air Bag, Head to Headrest; Chest to Air Bag; Knees to Knee Bolster
    - Passenger Dummy: Head to Air Bag; Chest to Air Bag; Knees to Glove Box

</tbody>
</table>

1. **Pre-Crash**
   1.1 Describe from visual inspection how the windshield is mounted and describe any trim material.

   Retained with glue
   Rubber and plastic trim

   1.2 Mark the longitudinal centerline of the windshield

   1.3 Measure pre-crash A, B, and C for the left side and record in the chart below.

   1.4 Measure pre-crash C, D, and E for the right side and record in the chart below.

   1.5 Measure from the edge of the retainer or molding to the edge of the windshield.

   | Dimension G (mm): | 5 mm |

2. **Post Crash**
   2.1 Can a single thickness of copier type paper (as small a piece as necessary) slide between the windshield and the vehicle body?

   X No - Pass. Skip to the table of measurements, complete it by repeating the pre-crash measurements in the post crash column, and calculate the retention percentage, which will be 100%.

   Yes, go to 2.2

   2.2 Visibly mark the beginning and end of the portions of the periphery where the paper slides between the windshield and the vehicle body.

   2.3 Measure and record post-crash A, B, C, D, E, and F such that the measurements do not include any of the parts of the windshield where the paper slides between the windshield and the vehicle body.

   2.4 Calculate and record the percent retention for the right and left side of the windshield.

   2.5 Is total right side percent retention less than 75%?

   Yes, Fail

   No, Pass

   2.6 Is total left side percent retention less than 75%?

   Yes, Fail

   No, Pass

ZERO POINT (0,0)

REMARKS:

Signature: [Signature]

Date: 4/22/09

I certify that I have read and performed each instruction.
This standard specifies limits for the displacement of vehicle components into the windshield area during a frontal barrier impact test at any speed up to and including 48 km/h.

1. Place a 165 mm diameter rigid sphere, with a mass of 6.8 kg on the instrument panel so that it is simultaneously touching the instrument panel and the windshield. (571.219 S6.1(a))

2. Roll the sphere from one side of the windshield to the other while marking on the windshield where the sphere contacts the windshield. (571.219 S6.1(b))

3. From the outermost contactable points on the windshield draw a horizontal line to the edges of the windshield. (571.219 S6.1(b))

4. Draw a line on the inner surface of the windshield that is 13 mm below the line determined in items 2 and 3.

5. After the crash test, record any points where a part of the exterior of the vehicle has marked, penetrated, or broken the windshield.

Provide all dimensions necessary to reproduce the protected area.
