## Final Report of FMVSS 138 Compliance Testing of 2010 Toyota Venza Four-Door MPV, NHTSA No. CA5105

### Abstract

Compliance tests were conducted on the subject 2010 Toyota Venza four-door MPV in accordance with the specifications of the Office of Vehicle Safety Compliance Test Procedure Number TP-138-03 for the determination of FMVSS 138 compliance. Test failures identified were as follows: None

1.1 PURPOSE OF COMPLIANCE TEST

A 2010 Toyota Venza four-door MPV was tested to determine if the vehicle was in compliance with the requirements of FMVSS 138. All tests were conducted in accordance with NHTSA/Office of Vehicle Safety Compliance (OVSC) Laboratory Test Procedure TP-138-03 dated July 12, 2007.

1.2 TEST VEHICLE

The test vehicle was a 2010 Toyota Venza four-door MPV. Nomenclatures applicable to the test vehicle are:

A. Vehicle Identification Number: 4T3ZA3BB2AU021370

B. NHTSA Number: CA5105

C. Manufacturer: Toyota Motor Manufacturing

D. Manufacture Date: 11/2009

1.3 TEST DATE

The test vehicle was tested during the time period April 21 through April 27, 2010.
SECTION 2

TEST PROCEDURE AND SUMMARY OF RESULTS

2.1 TEST PROCEDURE

Prior to test, the test vehicle was inspected for completeness, systems operability, and appropriate fuel and liquid levels, i.e. oil and coolant. The vehicle was then photographically documented as required by the NHTSA/OVSC Test Procedure. Tire sidewall and vehicle labeling information were recorded. The owner’s manual was reviewed, and pertinent tire and TPMS information were noted. Telltale’s symbol, color, location, and lamp function were checked.

Subsequent events included weighing the vehicle to establish the Unloaded Vehicle Weight (UVW) and the distribution of weight on the front and rear axles and each wheel position. The vehicle was loaded to its Lightly Loaded Vehicle Weight (LLVW) for three tire deflation scenarios. This LLVW included the weights of driver, one passenger, test equipment, and ballast. The vehicle was loaded to its Unloaded Vehicle Weight plus Vehicle Capacity Weight (VCW) for three additional tire deflation scenarios. The VCW included the weights of driver, one passenger, test equipment, ballast in the rear seat, and ballast in the rear cargo area. The vehicle is required to be loaded to its maximum capacity without exceeding either the Vehicle Capacity Weight or Gross Vehicle Weight Rating (GVWR). For determination of the telltale warning activation pressure, the recommended cold inflation pressure was identified from the vehicle placard.

The vehicle was instrumented with a Racelogic VBOX III 100 Hz GPS Data Logger and brake pedal trigger. The VBOX uses GPS to measure vehicle speed, time, and distance. Test data were recorded to a compact flash card. During the test, a stopwatch was used to determine the approximate “cumulative driving time” during each test phase. Cumulative driving time does not include time during the brake application or when the vehicle speed was below 50 km/h or above 100 km/h. Upon completion of a tire deflation scenario, graphs were generated by VBOX software showing vehicle speed versus time during the test procedures. The graphs furnish a second by second analysis of each calibration and low inflation pressure detection phase (as appropriate). The cumulative driving time was calculated by post-processing the VBOX graph data, and is reported in Section 3 (Test Data) as ‘Total Driving Time’.

The tire deflation test scenario consisted of four phases:

1. Calibration phase: Tires were set at vehicle placard cold inflation pressure and the vehicle was driven for at least twenty minutes of cumulative driving time between 50 and 100 km/h.
2. Detection phase: Immediately after calibration phase, the selected tire(s) were deflated to seven kPa (one psi) below the Telltale Warning Activation Pressure. After one minute, the inflation pressure(s) of only deflated tire(s) were rechecked and adjusted if necessary. The vehicle was started and driven to ensure that the low inflation pressure telltale illuminated.

3. Cool down phase: Vehicle was parked in the San Angelo Test Facility (SATF) open bay shielded from direct sunlight. Tires were allowed to cool down for a minimum of one hour. After cool down, the vehicle was started and the low tire pressure telltale was checked for re-illumination.

4. Extinguishment phase: Tires were adjusted to vehicle placard cold inflation pressure. The vehicle was started and driven to ensure that the low inflation pressure telltale extinguished.

Two malfunction scenarios were performed on the Toyota Venza. The first scenario was performed with the vehicle loaded to its LLVW. The malfunction was simulated by placing the compact spare tire, with no TPMS sensor, on the right front wheel position. The second scenario was performed by disconnecting power to the TPMS ECU.

2.2 SUMMARY OF RESULTS

Three tire deflation scenarios were performed on the test vehicle at LLVW:
   A. Left front
   B. Left rear and right rear
   C. Left front, left rear, right rear, and right front

Three tire deflation scenarios were performed on the test vehicle at UVW + VCW:
   D. Right rear
   E. Left front and left rear
   F. Left front, left rear, and right front

The data indicate compliance of the test vehicle’s tire pressure monitoring system for the six tire deflation scenarios tested.

One malfunction detection scenario was performed on the test vehicle at LLVW:
   G. Spare tire without TPMS sensor was applied to right front wheel position.

One malfunction detection scenario was performed on the test vehicle at UVW + VCW:
   H. Power was disconnected from TPMS warning ECU.

In both scenarios, the vehicle’s combination malfunction telltale properly operated per the standard’s requirements.

Note: See Data Sheet 3 (Sheet 2 of 22) for Test Weight.

TPMS TYPE: ( X ) Direct  (   ) Indirect  (   ) Other  Describe: 

TPMS MALFUNCTION TELLTALE:
(   ) Dedicated stand-alone  ( X ) Combination low tire pressure warning/malfunction telltale

METHOD OF MALFUNCTION SIMULATION:
Describe method of malfunction simulation: Spare tire without TPMS sensor was applied to right front at LLVW. (See Figure 5.17)

MALFUNCTION TELLTALE ILLUMINATION
(after ignition locking system is activated to “On” (“Run”) position):

Combination Malfunction Telltale

Driving in first direction:
Starting point: San Angelo Test Facility shop  Direction: see chart, page 67

24.3 km (15.1 mi) distance

Max speed: 99.5 km/h (61.8 mph)
Total Driving Time: 15:58 minutes (VBox time)

COMBINATION MALFUNCTION TELLTALE ILLUMINATES (FLASHING AND ILLUMINATION SEQUENCE) WITHIN 20 MINUTES:
( X )YES  (   )NO
DATA SHEET 4 (Sheet 2 of 4)
Scenario G – Malfunction Detection Test at LLVW - Spare Installed on Right Front

After 5 minutes with the ignition locking system in the “Off” or “Lock” position, does the combination low tire pressure/malfunction telltale flash for a period of at least 60 seconds but no longer than 90 seconds, and then remain illuminated when the ignition locking system is activated to the “On” or “Run” position? ( X )YES (   )NO (fail)

Time it takes before telltale starts flashing 3 seconds
Time telltale remains flashing 64 seconds
Time telltale remains illuminated >60 seconds
(Verified for a minimum of 60 seconds)

Deactivate the ignition locking system and then re-start the vehicle engine. Does the telltale’s illumination sequence repeat when the ignition locking system is activated and the engine running? ( X )YES (   )NO (fail)

Extinguishment Phase:

Restore the TPMS to normal operation. Is it necessary to drive the vehicle to extinguish the telltale? (   )YES (X )NO

| COMBINATION MALFUNCTION TELLTALE EXTINGUISHED: |
| ( X )YES (   )NO (FAIL) |

TPMS MALFUNCTION PERFORMANCE TEST RESULTS (PASS/FAIL) PASS
Spare without TPMS sensor was applied to right front at LLVW.

REMARKS: Replacing the right front tire with the spare will not produce a malfunction if the original right front tire/wheel assembly is stowed inside vehicle.

RECORDED BY: Todd P. Groghan DATE: April 23, 2010
APPROVED BY: Kenneth H. Yates

( ) Dedicated stand-alone (X) Combination low tire pressure warning/malfunction telltale

METHOD OF MALFUNCTION SIMULATION:
Describe method of malfunction simulation: Power was disconnected from the TPMS

MALFUNCTION TELLTALE ILLUMINATION
(after ignition locking system is activated to “On” (“Run”) position):

Combination Malfunction Telltale

Illumination upon start-up - driving was not necessary.

COMBINATION MALFUNCTION TELLTALE ILLUMINATES (FLASHING AND ILLUMINATION SEQUENCE) WITHIN 20 MINUTES:

(X) YES ( ) NO
After 5 minutes with the ignition locking system in the “Off” or “Lock” position, does the combination low tire pressure/malfunction telltale flash for a period of at least 60 seconds but no longer than 90 seconds, and then remain illuminated when the ignition locking system is activated to the “On” or “Run” position? ( X )YES (   )NO (fail)

- Time it takes before telltale starts flashing 0 seconds
- Time telltale remains flashing 64 seconds
- Time telltale remains illuminated >60 seconds
  (Verified for a minimum of 60 seconds)

Deactivate the ignition locking system and then re-start the vehicle engine. Does the telltale’s illumination sequence repeat when the ignition locking system is activated and the engine running? ( X )YES (   )NO (fail)

**Extinguishment Phase:**

Restore the TPMS to normal operation. Is it necessary to drive the vehicle to extinguish the telltale? (   )YES ( X )NO

**COMBINATION MALFUNCTION TELTATE EXTINGUISHED:**
( X )YES (   )NO (FAIL)

**TPMS MALFUNCTION PERFORMANCE TEST RESULTS (PASS/FAIL)**

- **Pass**

Power was disconnected from TPMS warning ECU.

**REMARKS:** None

**RECORDED BY:** Todd P. Groghan  
**DATE:** April 26, 2010

**APPROVED BY:** Kenneth H. Yates
The following statement, in the English language, is provided verbatim in the Owner’s Manual.

( X )YES   ( )NO

“Each tire, including the spare (if provided), should be checked monthly when cold and inflated to the inflation pressure recommended by the vehicle manufacturer on the vehicle placard or tire inflation pressure label. (If your vehicle has tires of a different size than the size indicated on the vehicle placard or tire inflation pressure label, you should determine the proper tire inflation pressure for those tires.)

As an added safety feature, your vehicle has been equipped with a tire pressure monitoring system (TPMS) that illuminates a low tire pressure telltale when one or more of your tires is significantly under-inflated. Accordingly, when the low tire pressure telltale illuminates, you should stop and check your tires as soon as possible, and inflate them to the proper pressure. Driving on a significantly under-inflated tire causes the tire to overheat and can lead to tire failure. Under-inflation also reduces fuel efficiency and tire tread life, and may affect the vehicle’s handling and stopping ability.

Please note that the TPMS is not a substitute for proper tire maintenance, and it is the driver’s responsibility to maintain correct tire pressure, even if under-inflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale.”
As specified, the following sections, in the English language, are required verbatim in paragraph form in the Owner’s Manual:

The following statement is required for all vehicles certified to the standard starting on September 1, 2007 and for vehicles voluntarily equipped with a compliant TPMS MIL before that time.

"Your vehicle has also been equipped with a TPMS malfunction indicator to indicate when the system is not operating properly."

The above statement in the English language is provided verbatim in owner’s manual:

( X )YES    (   )NO

For vehicles with a dedicated MIL telltale, add the following statement:

"The TPMS malfunction indicator is provided by a separate telltale, which displays the symbol "TPMS" when illuminated."

The above statement in the English language is provided verbatim in owner’s manual:

(   )YES    (   )NO    ( X )N/A

For vehicles with a combined low tire pressure/MIL telltale, add the following statement:

The TPMS malfunction indicator is combined with the low tire pressure telltale. When the system detects a malfunction, the telltale will flash for approximately one minute and then remain continuously illuminated. This sequence will continue upon subsequent vehicle start-ups as long as the malfunction exists.

The above statement in the English language is provided verbatim in owner’s manual:

( X )YES    (   )NO    (   )N/A

The following statement is required for all vehicles certified to the standard starting on September 1, 2007 and for vehicles voluntarily equipped with a compliant TPMS MIL before that time.

When the malfunction indicator is illuminated, the system may not be able to detect or signal low tire pressure as intended. TPMS malfunctions may occur for a variety of reasons, including the installation of replacement or alternate tires or wheels on the vehicle that prevent the TPMS from functioning properly. Always check the TPMS malfunction telltale after replacing one or more tires or wheels on your vehicle to ensure that the replacement or alternate tires and wheels allow the TPMS to continue to function properly."

The above statement in the English language is provided verbatim in owner’s manual:

( X )YES    (   )NO

DATA INDICATES COMPLIANCE:    PASS/FAIL:  PASS
DATA SHEET 5 (Sheet 3 of 3)
TPMS WRITTEN INSTRUCTIONS

Does the Owner’s Manual provide an image of the Low Tire Pressure Warning Telltale symbol (and an image of the TPMS Malfunction Telltale warning (“TPMS”), if a dedicated telltale is utilized for this function)?
( X )YES (   )NO

Does the Owner’s Manual include the following (allowable) information?
✓ Significance of the low tire pressure warning telltale illuminating
✓ A description of corrective action to be undertaken
✓ Whether the tire pressure monitoring system functions with the vehicle’s spare tire (if provided)
☐ How to use a reset button, if one is provided
✓ The time for the TPMS telltale(s) to extinguish once the low tire pressure condition or the malfunction is corrected

REMARKS: None

RECORDED BY: Todd P. Groghan DATE: April 21, 2010

SECTION 6
TEST PLOTS
Scenario A: Left Front Tire at LLVW
Test Date: 4/22/10
Data File Time: 25:41 minutes
Cumulative Driving Time: 20:21 minutes
Start Point: GAFB North Gate

Calibration Phase:

2010 Toyota Venza (CA5105) LF Calibration LLVW

Log Rate: = 100.00 Hz

LF Detection Phase: Telltale illuminated in 16 seconds. Driving was not necessary.
Scenario B: Left Rear, Right Rear Tires at LLVW
Test Date: 4/22/10
Data File Time: 24:55 minutes
Cumulative Driving Time: 20:34 minutes
Start Point: GAFB North Gate

Calibration Phase:

LR, RR Detection Phase: Telltale illuminated in 6 seconds. Driving was not necessary.
Scenario C: Left Front, Left Rear, Right Rear, Right Front Tires at LLVW
Test Date: 4/23/10
Data File Time: 24:45 minutes
Cumulative Driving Time: 20:36 minutes
Start Point: GAFB North Gate

Calibration Phase:

2010 Toyota Venza (CA5105) LF, LR, RR, RF Calibration LLWW

Log Rate := 100.00 Hz

LF, LR, RR, RF Detection Phase: Telltale illuminated in 8 seconds. Driving was not necessary.
Scenario D: Right Rear Tire at UVW + VCW
Test Date: 4/26/10
Data File Time: 24:35 minutes
Cumulative Driving Time: 20:37 minutes
Start Point: GAFB North Gate

Calibration Phase:

RR Detection Phase: Telltale illuminated in 9 seconds. Driving was not necessary.
Scenario E: Left Front, Left Rear Tires at UVW + VCW
Test Date: 4/26/10
Data File Time: 25:26 minutes
Cumulative Driving Time: 20:40 minutes
Start Point: GAFB North Gate

Calibration Phase:

2010 Toyota Venza (CA5105) LF, LR Calibration UVW+VCW

Log Rate := 100.00 Hz

LF, LR Detection Phase: Telltale illuminated in 18 seconds. Driving was not necessary.
Scenario F: Left Front, Left Rear, Right Front Tires at UVW + VCW
Test Date: 4/27/10
Data File Time: 24:51 minutes
Cumulative Driving Time: 20:36 minutes
Start Point: GAFB North Gate

Calibration Phase:

2010 Toyota Venza (CA5105) LF, LR, RF Calibration UVW+VCW

Log Rate := 100.00 Hz

LF, LR, RF Detection Phase: Telltale illuminated in 7 seconds. Driving was not necessary.
Scenario G: Malfunction Detection Test at LLVW
Test Date: 4/23/10
Data File Time: 21:02 minutes
Cumulative Driving Time: 15:58 minutes
Start Point: San Angelo Test Facility shop

Malfunction Telltale Illumination:

2010 Toyota Venza (CA5105) RF Spare Tire Illumination LLVW

Log Rate := 100.00 Hz
Follow the correction procedures.

After taking the specified steps to correct the suspected problem, check that the warning light turns off.

 Warns the driver to fasten his/her seat belt. | Fasten the seat belt. |
| ![Passenger Icon] (On the center display) | Front passenger's seat belt reminder light (warning buzzer)*2  
 Warns the front passenger to fasten his/her seat belt. | Fasten the seat belt. |
| ![Tire Icon] | Tire pressure warning light | When the light comes on:  
Low tire inflation pressure.  
Adjust the tire inflation pressure.  
When the light comes on after blinking for 1 minute:  
Malfunction in the tire pressure warning system.  
Have the system checked by your Toyota dealer. |
■ Changing the engine oil (U.S.A. only)
  Make sure to reset the oil change system. (→ P. 491)

■ The tire pressure warning light may come on due to natural causes
  The tire pressure warning light may come on due to natural causes such as natural air leaks or tire inflation pressure changes caused by temperature. In this case, adjusting the tire inflation pressure will turn off the warning light (after a few minutes).

■ When a tire is replaced with a spare tire
  The compact spare tire is not equipped with the tire pressure warning valve and transmitter. If a tire goes flat, the tire pressure warning light will not turn off even though the flat tire is replaced with the spare tire. Replace the spare tire with the repaired tire and adjust the proper tire inflation pressure. The tire pressure warning light will turn off after a few minutes.
CAUTION

If a blowout or sudden air loss should occur
The tire pressure warning system may not activate immediately.

Maintenance of the tires
Each tire, including the spare (if provided), should be checked monthly when cold and inflated to the inflation pressure recommended by the vehicle manufacturer on the vehicle placard or tire inflation pressure label (tire and load information label). (If your vehicle has tires of a different size than the size indicated on the vehicle placard or tire inflation pressure label [tire and load information label], you should determine the proper tire inflation pressure for those tires.)

As an added safety feature, your vehicle has been equipped with a tire pressure monitoring system (TPMS-tire pressure warning system) that illuminates a low tire pressure telltale (tire pressure warning light) when one or more of your tires is significantly under-inflated. Accordingly, when the low tire pressure telltale (tire pressure warning light) illuminates, you should stop and check your tires as soon as possible, and inflate them to the proper pressure. Driving on a significantly under-inflated tire causes the tire to overheat and can lead to tire failure. Under-inflation also reduces fuel efficiency and tire tread life, and may affect the vehicle's handling and stopping ability.

Please note that the TPMS (tire pressure warning system) is not a substitute for proper tire maintenance, and it is the driver's responsibility to maintain correct tire pressure, even if under-inflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale (tire pressure warning light).
CAUTION

Your vehicle has also been equipped with a TPMS (tire pressure warning system) malfunction indicator to indicate when the system is not operating properly. The TPMS (tire pressure warning system) malfunction indicator is combined with the low tire pressure telltale (tire pressure warning light). When the system detects a malfunction, the telltale will flash for approximately one minute and then remain continuously illuminated. This sequence will continue upon subsequent vehicle start-ups as long as the malfunction exists. When the malfunction indicator is illuminated, the system may not be able to detect or signal low tire pressure as intended.

TPMS (tire pressure warning system) malfunctions may occur for a variety of reasons, including the installation of replacement or alternate tires or wheels on the vehicle that prevent the TPMS (tire pressure warning system) from functioning properly. Always check the TPMS (tire pressure warning system) malfunction telltale after replacing one or more tires or wheels on your vehicle to ensure that the replacement or alternate tires and wheels allow the TPMS (tire pressure warning system) to continue to function properly.

NOTICE

- Precaution when installing a different tire
When a tire of a different specification or maker is installed, the tire pressure warning system may not operate properly.
