

3.8L Engines for Pontiac Bonneville Cars Added to Web Inventory at Motor Reseller Website

3.8L engines in used condition for Pontiac Bonneville vehicles are now a part of the web inventory listed for sale at the PreownedEngines.com website at <http://preownedengines.com/pontiac-bonneville-3-8l-used>.

San Diego, CA ([PRWEB](#)) August 04, 2015 -- Reaching out to new suppliers in the North American automotive industry has helped the Preowned Engines company to recently acquire older vehicle replacement motors. The company is now featuring used 3.8L engines for Pontiac Bonneville cars in its web searchable inventory. More data about block mileage or sale pricing can be reviewed at <http://preownedengines.com/pontiac-bonneville-3-8l-used>.

The editions in stock are now split between the series I and series II units built by General Motors from 1982 and 2005. The versions are RWD or FWD depending on the actual year of manufacturing. To make it easier for consumers to locate the right RPO codes, the LG3, LN3, L36, L27 and L67 numbers are now easily searchable when using the POE website.

"The Bonneville and other Pontiac vehicles that are now out of production are now a portion of the vehicle brands that we are supported in our new inventory this year," said a PreownedEngines.com rep.

A portion of the nationwide suppliers that are now providing the GM based inventory are part of recycling organizations that help regulate standards in the used parts industry. Since the 3.8-liter builds being offered are certified used, all mileage counts and inspections of the external components have been completed.

"The various subsidiaries of GM vehicles that have used the 6-cylinder 3.8-liter block can be verified through our web system to help consumers match VIN data," said the rep.

The Preowned Engines company has completed the production of its all-mobile homepage this year. Going forward this year, consumers using any type of tablet PC or cellular phone will have the same opportunity as PC based consumers to search for components and pricing when visiting the homepage.

About PreownedEngines.com

The PreownedEngines.com company is one of the largest second hand suppliers of automobile parts in used condition in North America. The company uses suppliers in all 50 states to provide its consumer fulfillment solutions. The PreownedEngines.com company sells and services non-domestic and American motors that are I3, I4, I6 and larger sizes.
