DataOne Software releases version 1.5 of its VINS service.

DataOne Software today released version 1.5 of its premier Vehicle Inventory Now Services (VINS).

(PRWEB) August 11, 2002 -- BOSTON, MA. - AUGUST 09, 2002 - DataOne Software today announced the immediate availability of its VINS 1.5 upgrade. The new version includes important fixes to inventory management and user interface with special emphasis on features requested by existing dealerships. "This update brings a new level to the stability and performance to the VINS service." said Jock Pereira, President and CEO of DataOne Software. "With each new version of VINS our goal is to integrate requests made by our existing dealerships. There is no sense in adding to a software service if it does not benefit its end users. We are proud to announce this major upgrade; feedback from our beta customers has been very positive, the undertone being that it is helping them to do their jobs easier and faster." The VINS service allows dealerships to view their entire inventory through their web browser, make changes and add photos. Inventory is sent to their web site and all their online malls every 24 hours. Dealerships can also easily print window stickers and buyers guides. VINS is currently available within the United States. For further information please contact Jim Donaher: (877) GET-VINS or (617) 510-2975.
