

InventHelp Introduces MOTORCYCLE SAFETY SYSTEM - Designed to Help Prevent Injuries or Worse (BMA-4136)

InventHelp, based in Pittsburgh, is working to submit the Motorcycle Safety System to companies for their consideration.

Pittsburgh, PA ([PRWEB](#)) January 07, 2014 -- An inventor from Worcester, Mass., has over 35 years of experience with motorcycles, so he knows the dangers that face motorcyclists daily. "I decided there needs to be a way to provide much-needed safety during serious impact accidents," He then created the MOTORCYCLE SAFETY SYSTEM.

This patent pending invention provides accident protection for rider and passenger by dissipating forward energy if impact occurs, releases if accident involves sliding or falling and may reduce medical or other expenses.

Usable with scooters, motorized bikes, 3-wheelers, ATVs, off-road vehicles, snowmobiles, etc., the system is durable, lightweight, corrosion-proof, stain-resistant, adjustable, compact, easy to use and install, retractable and cost-effective.

The original design was submitted to the [Boston office of InventHelp](#). It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 12-BMA-4136, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
