

InventHelp Invention Protects Windshield Wiper Blades from the Elements (PND-4691)

A leading inventor firm, InventHelp is submitting the WIPER BLADE SOCK to companies for their review.

PITTSBURGH, PA ([PRWEB](#)) September 30, 2016 -- Tired of having to clear snow and ice from the wiper blades of his car, an inventor from Atlantic City, N.J., decided to design a way to protect them during non-use.

Easy to use and suitable for all drivers, the patent-pending WIPER BLADE SOCK protects windshield wiper blades from the elements during non-use in an optimal manner. It avoids freezing in the winter months, which saves the user from having to clear off snow and/or ice. It also prevents premature drying out due to the sun. As a result, the invention saves time, effort and money.

The original design was submitted to the Philadelphia office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-PND-4691, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
