Alternative Camper is More Lightweight, Affordable and Easily Stored - Designed by InventHelp Client (ALL-860)

InventHelp is working to submit this invention, STYROHOME, to appropriate companies for their review.

PITTSBURGH, PA (PRWEB) November 22, 2016 -- Since there are no affordable, full stand-up height, lightweight campers that can be pulled by small vehicles, an inventor from Ball Ground, Ga., thought that there should be a better alternative to all of those heavy, expensive campers for a variety of purposes.

"That's when I came up with the STYROHOME," he said. He then created and tested a prototype of his idea.

This patent-pending alternative camper is the best option instead of heavy, expensive campers. Because of its lightweight and compactness, it can be pulled by small vehicles and can be stored in residential garages. The camper is useful for camping, storage, business or emergency shelter and it also can be used for hunting, at trade shows, selling goods at markets, while tailgating or even when traveling cross-country. Dents and scuffs are easily repaired. Slide-out sections allow for larger spaces for extreme comfort.

Affordable, versatile and easy to use, the STYROHOME can be customized to particular needs with unlimited pre-molded interior options. It's also capable of being at a disposable price point.

The original design was submitted to the Atlanta office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers.
