

Improved Alert for Emergency Vehicles - Designed by InventHelp Client (MWK-162)

InventHelp is attempting to submit the STOP NOW to appropriate companies for their consideration.

PITTSBURGH, PA ([PRWEB](#)) November 30, 2016 -- When emergency vehicles speed through intersections on their way to or from a distressed site, their drivers rely on sirens to prompt other drivers to make way for safe and speedy passage, but this isn't always adequate, which raises the risks of serious accidents. "In order to help save lives, I came up with the idea for STOP NOW," said a concerned inventor from Milwaukee, Wis.

This system ensures safer passage for a speeding emergency vehicle (EV) by making sure that other drivers are alerted to the approaching EV. As a result, it gives drivers time to pull over to the side of the road, which helps prevent accidents resulting in damage, injury and/or fatality. Overall, the system promotes peace of mind. Serving as an alternative to conventional traffic-safety products, STOP NOW benefits police, paramedics, firefighters, etc.

The original design was submitted to the Milwaukee office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-MWK-162, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
