

Protective Covering Invented to Preserve the Pop-out Section of an RV Trailer Tent

Invention Submission Corporation announces that one of its clients, an inventor from St. Jerome, Quebec, has invented an accessory for pop-out campers. This invention is patented and a prototype is available.

([PRWEB](#)) September 20, 2004 -- Invention Submission Corporation, America's leading inventor service company, announces that one of its clients, an inventor from St. Jerome, Quebec, has invented an accessory for pop-out campers. This invention is patented and a prototype is available.

The "Easy Clip-on Trailer Tent Shield" would keep moisture out of the interior of the pop-up section of a trailer. Designed to ensure that everything on the inside of the camper stays dry, the shield would be ideal for protecting bedding from moisture and precipitation. In addition, the shield could be used to block bird droppings and tree sap from the RV's original top, preserving the condition of the trailer tent.

The rectangular tarp would be made from a weatherproof vinyl or canvas material. The shield would have two galvanized steel support arms to hold the covering taut and at a downward slope to promote proper rainwater drainage. Anchors, attached to the wooden underside of the bed platform, would offer support to the arms.

Invention Submission Corporation is attempting to submit the invention to companies for review. If substantial interest is expressed, the company will attempt to negotiate for a sale or royalties for the inventor.
