TMW Systems Integrates TMW.Suite, TruckMate Transportation Management Software with 123Loadboard

TMW Systems announced the integration of its comprehensive TMW.Suite® and TruckMate® transportation management software solutions with 123Loadboard, an industry leader in freight matching services for North America's transportation industry.

Cleveland, OH (PRWEB) February 06, 2017 -- TMW Systems announced the integration of its comprehensive TMW.Suite® and TruckMate® transportation management software solutions with 123Loadboard, an industry leader in freight matching services for North America's transportation industry. Users of either TMW platform who also have accounts with 123Loadboard can post loads or trucks to its online marketplace via TMW's Freight Board Interface.

Through the integration, TMW.Suite and TruckMate users have the ability to add, update, cancel and remove loads from within their respective TMS program. Posted loads auto-populate in 123Loadboard, giving carriers and others using the platform access to a greater quantity of loads in real time. In addition, drivers can post trucks available for use, enabling brokers and asset-based carriers to take advantage of 123Loadboard's platform.

"This TMW integration will enable 123Loadboard members to post their loads and trucks to the load board quickly and easily using automation to simplify the process," said Loarn Metzen, vice president, 123Loadboard. "Plus, having immediate access to up-to-date load and truck data will ensure that 123Loadboard's platform remains efficient while helping brokers and fleet owners move greater freight volumes."

123Loadboard serves upwards of 64,000 qualified carriers and more than 45.6 million truck loads posted annually, helping more than 325,000 carriers, owner-operators, brokers and shippers using its service to find loads and increase their loaded miles. The new integration also works with 123Loadboard's mobile app versions, allowing its 150,000-plus mobile app users to find more loads while they are on the road.
