

## **2007 Lexus GS 450h: Full Hybrid Technology Revs Up With Superior Toyota Aftermarket Parts**

*The Lexus GS 450h is a Super Ultra Low Emissions Vehicle. A SULEV-rated vehicle is 90% cleaner than the average new car. Hybrid technology, driving dynamics, motoring comfort and generous space inside redefines the new Lexus GS450h.*

([PRWEB](#)) June 18, 2005 -- The 2007 Lexus GS 450h is the world's first hybrid luxury sedan and the first full hybrid vehicle with a front engine and rear wheel drive.

'Once again, we've applied our formula of no compromise engineering - this time to a luxury sport sedan which proves to us that hybrid power trains can work superbly in virtually any application,' said Lexus Vice President of Marketing Mark Templin. 'It's very important to continue pursuing substantial reductions in fuel consumption and emissions, while continuing to improve performance and driving pleasure. Our customers wouldn't have it any other way.'

It will be a rear wheel drive full hybrid making it able to travel at low speeds under electric propulsion alone. Lexus says the GS 450h will have gas mileage similar to the average 2-liter, 4-cylinder compact sedan.

The Lexus GS 450h is a Super Ultra Low Emissions Vehicle. A SULEV-rated vehicle is 90% cleaner than the average new car.

The GS 450h will have a 3.5-liter V6 engine combined with a high-output electric motor--all driving the rear wheels--to pack horsepower at the level of a V8 engine. Lexus says it will have horsepower equivalent to a 4.5 liter V8. 0-60 acceleration is expected to be less than 6 seconds. For perspective, the 2006 GS 430 has a 4.3-liter V8 that has 300 horsepower.

It's built on the GS 430 platform and offers similar standard equipment and options, including a sunroof and perforated leather seats. It is visually identical to the GS 430, except for a large air dam on the front bumper to cool the electric motor, a power meter on the dashboard instead of an odometer, and 18-inch light-alloy wheels.

Hybrid technology, driving dynamics, motoring comfort and generous space inside redefines the new Lexus GS450h. Featuring more powerful and fuel efficient engines, innovative assistance systems, a wide range of safety features, as well as a superior standard of equipment, the new Toyota Lexus of today need no less than superior BMW replacement parts when the need arises.

This is where Parts Train comes in. Having a vast array of well crafted Toyota Replacement Parts, Performance Parts, Aftermarket Parts to choose from its online store at <http://www.partstrain.com/ShopByVehicle/TOYOTA> available 24 hours a day to serve your most demanding auto parts needs. Excellence is synonymous to service for all of Parts Train's customer service staff in dealing with all of your auto parts inquiries.
