TrakSoft Inc. Announces the Release of PFS-Trans, Local Version, a Project Funding System for Local Transportation Departments and Private Transportation Companies

TrakSoft Inc., a professional software development firm, today announced the January 31st release of an innovative and professional Project Funding System for Local Transportation Departments (Cities and Counties) and Private Transportation Construction Companies.

Tallahassee, FL (PRWEB) January 31, 2005 -- "PFS-Trans (Local Version) provides the capability to plan, manage, and track the funding for Transportation construction Projects," said Gary Harris, Director and Chief Developer, "and can provide a wide range of data search options and management reporting."

PFS-Trans will manage and track all information about transportation construction projects to include Funding, Approval Dates, Authorizations, Modifications, Expenditures, and much more. Local Governments will be able to know how much funds are appropriated to projects as well as what is available to be appropriated at any time. Private Transportation Construction Companies will be able to manage their funding resources to ensure all projects stay within budget.

PFS-Trans is extremely flexible and powerful. It has an extensive Project Search Engine that allows its users to search for projects based on over 40 different data elements. Other capabilities include intuitive screens, extensive reporting, project document management, two levels of security, and support for handling multiple organizational units. The detailed reporting capabilities will allow easy reconciliation with other systems.

In addition to the Local Version, PFS-Trans is available in a version for State-Level Departments of Transportation. It provides the capability to track and manage federal and local funding for State-Level Projects. Additionally, PFS-Trans will transmit (via FTP) project and funding data, and electronic signatures to the Federal Highway Administration's (FHWA) FMIS-4 System. This will eliminate the need for double entry and speed up Federal Funding Approvals. It will provide the capability to States for balancing their figures against the figures provided by FHWA's system, increasing data integrity and user productivity.

"This is an outstanding that can be used to manage and control construction costs," said Gary Harris, "and fully functional free trial download versions are available."

TrakSoft Inc., in Tallahassee, Florida, specializes in professional and unique software for both the government and private sectors. For more information, please visit www.PFSTrans.com.
